

10X LINE WITH VISUAL STATUS INDICATOR TRIM (VSL)

Frequently Asked Questions

91012

Is VSL trim handed?

No, VSL trim is designed to be non-handed. This means it can be easily installed on doors with either a left or right handing.

What functions can I get with VSL trim?

VSL trim is versatile and comes in both non-keyed and keyed functions. These functions are designed to suit a variety of specific needs and applications.

Is VSL trim only available on the outside of the door?

VSL trim offers flexibility. You can install it on the outside only, inside only, or on both sides of the door. Just be sure to use the correct option codes in your order to specify which side(s) should have VSL trim.

What kind of trim designs work with VSL?

The VSL is currently compatible only with our angled lever design, known as the L Lever. This lever conveniently returns to within ½ inch of the door. We may offer additional trim designs in the future.

If I only want VSL trim on one side, what goes on the other side?

For single-sided VSL indicator trim, you can choose the type of lever you want on the opposite side. If you don't specify, we'll supply our standard angled lever (L Lever). Just remember to specify different designs in your order, similar to how you would order split trim.

Can I use VSL trim on doors thicker than 1-3/4 inches?

Yes! VSL trim is made to work with doors up to 2-5/16 inches thick. While our standard units are for 1-3/4 inch doors, you can request a different thickness when you place your order.

What finishes are available for VSL trim?

VSL trim is available in all standard finishes as offered on the 10X Line bored locks.

How does VSL trim differ from standard trim?

VSL (Visual Status Lock) trim is designed to clearly indicate the locked/unlocked status of the door at a glance.

What is the warranty on VSL trim?

VSL trim is backed by the same warranty as the 10X Line, which is a 10-year limited warranty. Please refer to our warranty documentation for complete details and limitations.

Can I retrofit existing doors with VSL trim?

Yes, in most cases. VSL trim is designed to be compatible with standard door preparations, making it easy to install on existing doors using a standard bored lock prep.
