## Lane Departure Warning (LDW)

When the vehicle enters the warning area, the LDW alerts you with slight steering wheel vibration as well as a warning display.

## Forward Collision Warning (FCW)

Alerts you when it detects the possibility of your vehicle colliding with the vehicle in front of yours.

## Collision Mitigation Braking System (CMBS)

CMBS is designed to alert you when a potential front collision is determined, as well as to reduce your vehicle speed to help minimise collision severity when a collision is deemed unavoidable.

## Road Departure Mitigation System (RDMS)

Alerts and helps to assist you when the system detects a possibility of your vehicle unintentionally crossing over detected lane markings.

## Adaptive Cruise Control (ACC) with Low Speed Follow (LSF)

Helps maintain a constant vehicle speed and a set following interval behind a vehicle detected ahead of yours and, if the detected vehicle comes to a stop, can decelerate and stop your vehicle.

## High Beam Support System (HBSS)\*

Automatically changes your headlights from low to high on a clear road, and then back to low beam when an oncoming vehicle is detected.

<sup>†</sup>Honda SENSING technologies are driver-assist technologies and should not be used in place of safe driving practices. Drivers should continue to monitor the road at all times.
