A BATTERY DESIGNED FOR EVERYDAY LIFE

Based on our right-sizing approach, we selected a battery that easily meets your daily needs and also minimises carbon impact in the production lifecycle. Since the average New Zealander drives under 30 km per day, the 224 km range is sufficient to handle your everyday activities – with a natural driving feel.

Charging times, like all EVs, are dependent on various conditions at the time of charging, e.g. the type of charger, battery temperature and ambient temperature. In colder conditions this may lead to an increase in the charging time.

35.5^{kWh}

LITHIUM ION BATTERY

40^{MINS*}

20% - 80% DC CHARGING

5^{HRS*}

100% AC CHARGING

*The exact charging time depends on various conditions at the time of charging, e.g. the type of charger, battery condition, charging patterns, as well as the battery temperature and ambient temperature. In cold conditions, both battery and ambient temperature will impact the charging time required and, in certain situations, this may lead to a significant increase in the charging time.
