

Super Generator for Covid Immune Protocol

Developed by Barbara Musser, Senior SAEM Practitioner

Just as generators can support and extra boost of needed specific energies over time, a Super Generator can support a group of energies or protocol over time.

1. Assess the need for this special generator for the client. It's useful for health care practitioners and for those who are exposed to a high viral load of Covid-19. If indicated that they can benefit, do the following:
2. Set up a Thought Form of your client and connect them to another Thought Form in the shape of a generator box. Expand the capacity of the generator box to be a Super Generator, capable of supporting a protocol. Do this by programming the generator to be a Super Generator for the specific client. Surround the Thought Form and Super Generator Thought Form with Universal Love and Light.
3. Set up the Super Generator to bring the energies into the Soul Layer with the intention to nourish and bathe the entire HES in the protocol, in this case the Covid-9 Immune Protocol. Also instruct the Super Generator to bathe every cell and molecule in the client's physical body with the energies of the protocol.
4. Follow the Covid-19 Immune Protocol by bringing in the energies in the order listed in the protocol into the Super Generator. Program the energies to be the maximum beneficial amount for the client. There is no need to dowse the % of effectiveness of the Layers. Pack the Super Generator with the energies including the harmonizing energies and the declarations. Include IBWSIB.
5. Dowse for the length of time the Super Generator is needed and the frequency for repeating the protocol. It's probably best to program it for a maximum of 7 days because it may start to lose potency.

6. Place the Thought Forms on your altar and check them at least once daily for effectiveness. Adjust the frequency if needed.
7. Check at the end of the programmed time to see if it needs to be repeated. If so, dismiss the original Super Generator and set up a new one.
8. When the procedure is no longer needed, dismiss the Generator Thought Form. Complete with Harmonizing the Layers and Harmonizing Blend. IBWSIB. Dismiss the client Thought Form.
