

## Reattaching the Silver Tethers

Occasionally one of the silver tethers that hold the Human Electromagnetic Field in place inside the structure will pull loose from where it resides in one of the major hubs of the structure, the inner edge of the soul layer. When this occurs a buzzing electrical sensation may be reported and if enough of the tethers are pulled away the HEMF will actually sag or drift within the structure.

Sometimes people feel the tether smacking them in the forehead or eye and make comments like: "I feel like there is an electrical storm over my head." Or "I think I have an energetic bee that keeps stinging me in the head. It's driving me nuts!"

If the structure has been drifting, reconnecting the detached tethers will anchor it. If the HEMF has sagged or buckled in any way doing this same procedure will lift it back into place. An Operating Principle of the HEMF is that it seeks stability. It will rapidly cooperate with your efforts.

## Reattaching the Silver Tethers

1. With permission and applying the Edge Practice determine need by dowsing yes or no.
2. Dowse how many tethers need to be reattached.
3. Using your hand run it through the HEMF edge to determine the location of the detached tethers. Instruct your light fingers to telegraph to the detached tether.

4. At the base of the tether bring in *Universal Love and Light* . Stroke with *ULL* out from the HEMF edge along the detached tether.
5. Using *ULL* stroke the tether use your focused intention to aim for the place in the inner edge of the soul later where this tether will hook in and attach. You will feel the pull of this location as the tether recognizes itself.
6. Lift the detached tether back up and out. Follow the end of the tether down into the hook and notice the hook as it drops into the inner edge.
7. Repeat this until all the detached tethers are reattached.
8. Bring in *universal love and light* throughout the tethers and HEMF to soothe and mend.
9. Bring in the *Attitude of the Strength of Archangel Michael* into the containing membrane which wraps all around the tethers and the edge of the HEMF holding it like a big sack.
10. *Integrate, Blend, Witness, Stabilize, Integrate and Blend.*
