

Severing Resonating Cords

What?

HEMF Emotional Signatures can be so full that they develop cords which extend out to other parts of the subtle structure. They are vibrating in resonance with the emotional content held in the HEMF system. HEMF Emotional Signatures are usually hot or active and consistently live in the current moment. These signatures radiate out at a rate that is compatibly resonate with other anatomical parts. Resonating Cords evolve because the Emotional Access Points are misaligned. Realigning Emotional Access Points is critical before **Severing Resonating Cords**.

Why?

These parts attract to themselves HEMF fibers or cords that release out of the built up content of the signatures. This pathology creates an HEMF network that can be wide ranging and effectively reaching distant parts of the structure. It can be considered a type of subtle inflammatory process. Resonate Cords can affect the color, health and flexibility of the entire HES. When they connect into a specific part of the anatomy Resonant Cords are also impacting the system within which that anatomy is included. You may find the Template is a common location of Resonating Cords. This is because of its relationship with the HEMF of the Microbiome. Because of its absorptive nature the Microbiome magnetically attracts emotional content to itself where it is suspended in the Template around but still completely outside of the HEMF.

How?

Untangling Resonate Cords is an important step toward a more vibrant whole structure health. It is necessary to reduce the clutter they create as well as to disconnect the powerful HEMF Emotional Signature they project out into the larger structure.

When Resonate Cords link an HEMF Emotional Signature to another part of the HES it usually expands in power and strength. Pulling the core of the emotion with it into locations in the structure that are unrelated to the business of the HEMF generate in another part of the HES a tie-in to the original emotional content and even the event that caused the emotional debris.

This exaggerates the impact of the HEMF Emotional Signature and the event making a stronger structural pathology. To release the Resonate Cord requires capturing the core of the emotion and dismissing it. As the extended connection is removed and dismissed, the Resonate Cord retracts back into the original HEMF Signature and then, it relaxes the signature preparing it for removal.

Sacred Anatomy Energy Medicine

Severing Resonating Cords

Symptoms: Strong and intense emotion that is difficult to understand.

The pulse will be thick and a little slow and may even catch in places. The percentage of effectiveness will be between 50% and 65%. There will be a need to remove between 3 and 10 HEMF Emotional Signatures. There is a deep resonate tone you will feel beneath this composite of the signatures that dominates the HES. It has a broad base and is heavy feeling and will slow the dowsing rod. Realign Emotional Access Points first.

1. With permission, applying your Edge, determine the need to Sever Resonating Cords. Realign Emotional Access Points before proceeding.
2. Determine how many Resonating Cords will need to be severed. Ask Archangel Michael to lend you his sword. Sever left, right, back, front, below and above.
3. Name the related System.

4. After you have severed each Cord starting at the top of the HES like a root pull the emotional core out of this System. The cord will feel like a plug that is anchored at the center of the specific part of the anatomical system where the Resonating Cord originated. It will leave a tunnel-like hole behind.(there may be more than one system)
5. Fill the hole with *ULL*. Pack each one.
6. Track back from the start of the hole into the identified originating system and fill the entire system with *ULL*.
7. Remove the Emotional Signature/s from the HEMF. As you lift out the signature feel the vibration of the Resonating Cord which will still be active and continuing to shake. It will continue vibrating until you pull both the resonate cord and the signature out- thank it, and release it into the Sun.
8. Replenish the HEMF with *HEMF Radiance*.
9. Fill all the holes and the involved systems with *ULL*.
10. Bring in *Harmonizing the HEMF* and *Harmonizing*- which ever system you were working with.
11. *IBWSIB*
