

SAEM Procedure

## Seasonal Allergies and Hypersensitivities

1. At the Edge determine the need for this procedure.
2. Determine the allergy or sensitivity. Check: grass, flowers, trees or plants.
3. Determine the percentage of receptor sites in overdrive
  - a. Ask the rod to show on a clock face where receptor sites for the specific activating pollen are set at **optimum health**
  - b. Ask the rod to show on a clock face where receptor sites for the specific activating pollen are **currently set**
4. Extend light fingers and massage receptor sites up, down, left, right and back, front
5. Check the dowsing rod to see where the setting is on the clock face. It should either be at optimum or closer to it.
6. If it is not at optimum yet, massage the receptor sites again, then check again until the rod indicates optimum.
7. Check if there's a need to clear the signature for the specific allergy
8. Remove a signature if needed.
9. Bring in *ULL* to soothe the structure
10. Check to see how many additional energies are needed . Check your Energies List and bring in what is required.
11. *IBWSIB*
