

## The Chakra from Entry to Exit

Enter **Anterior Alignment Valves** from the Soul Layer as Single Individuated generic currents: **Function**, **Purpose** and **Wisdom**

They create: **Soul Pathway** (entering triple current stream)  
Each current passes through a designated **Function**, **Purpose**, **Wisdom**  
**Anterior Lesser Gate** into:

**(A) Anterior Chamber: “Intentionality” and (P) Posterior Chamber: “Receptivity”**

(made of 3 nodes that mirror each other: 1.**Function** 2.**Purpose** 3.**Wisdom**)

### **1A) Anterior Function Node-**

The incoming **Function Soul Pathway** goes into the **Function Node** and begins to increase speed.

50% of the function current in the **Anterior Function Node** splits off and goes through the **Anterior Osmotic Function Gate** on the right side of the **HES** into **Function Corridor** where it maintains pure cooling intentionality as it passes through the **Posterior Osmotic Function Gate** into the **Posterior** where it mirrors the action in reverse.

### **Anterior Function Greater Gate**

After the **Function** energy divides, the remaining energy in the **Anterior Function Node** achieves the proper speed and the current shifts from horizontal to vertical spin. The fast spinning now vertical (counterclockwise spinning) **Function Current** enters the **Anterior Function Greater Gate** in the **Core Sheath**.

Into the **Core**: the now vertical counter clockwise spinning **Function Current** has retained the direction of the spin that it had when it was horizontal. The **Function Current** enters the **Core** that is spinning the exact opposite direction as the incoming **Function**. This causes a toroid implosion- this happens when two energies going the opposite direction at incredible speed encounter each other. The reaction is that they then explode outward in a toroid explosion. The intensity of the encounter informs the **Function Current** and creates the generative power of the **Chakra**.

### 1B) *Posterior Function Node- “Receptivity Chamber”*

**Informed Function Current** Into the **Posterior Chamber “Receptivity”** through the **Posterior Function Greater Gate**. Here the **Posterior Function Node** blends the cooling energies reserved by the **Function Corridor** and the vertical function energies informed by the **Core** as they slow and incorporate what they have learned from the **Core** transit. As the **Function Current** informed by the **Core** slows, it returns to a horizontal position, is filled with the witnessing and receptive environment of **Receptivity** and prepares to exit the **Receptivity Chamber** as a fully empowered representative of the **Function** of a specific **Chakra**.

The **Chakra Function Current** then moves out through the **Posterior Function Lesser Gate** into the outgoing **Chakra Stream**.

It disassembles in the **Function Dispersal Valve** at the end of the **Chakra Stream** in the **Inner Edge of the Soul Layer** and enters the **Soul Layer** to deliver the specific **Chakra’s Function** message.

---

### 2A) *Anterior Purpose Node-*

The incoming **Purpose Soul Pathway** goes through the **Anterior Purpose Lesser Gate** into the **Purpose Node** and begins to increase the speed of the spin that is spinning horizontally clockwise.

(There is no split of the energy and there is no **Purpose Corridor**.)

### *Anterior Purpose Greater Gate*

After the Purpose energy in the **Anterior Purpose Node** achieves the proper speed and the current shifts from horizontal to vertical spin. The fast spinning vertical (clockwise spin) **Purpose Current** enters the **Anterior Purpose Greater Gate** in the **Core Sheath**.

Into the **Core**: the now vertical clockwise spinning **Purpose Current** has retained the direction of the spin that it had when it was horizontal. The **Purpose Current** enters the **Core** that is spinning the exact opposite direction as the incoming **Purpose**. This causes a toroid implosion- this happens when two energies going the opposite direction at incredible speed encounter each other. The reaction is that they then explode outward in a toroid explosion. The intensity of the

encounter informs the **Purpose Current** and creates the generative power of the **Chakra**.

### **2B) Posterior Purpose Node- “Receptivity Chamber”**

Informed **Purpose Current** Into the **Posterior Chamber “Receptivity”** through the **Posterior Purpose Greater Gate**. Here the **Posterior Purpose Node** has nothing to blend. It takes the purposeful action produced by being informed by the **Core** and moves to exit the node as soon as the vertical **Purpose** energies informed by the **Core** slow it down. The current must incorporate the education received by the **Core** transit. As the **Purpose Current** slows, it returns to a horizontal position, and is filled with the witnessing and receptive environment of **Receptivity**. The **Purpose Current** prepares to exit the **Receptivity Chamber** as a fully empowered representative of the **Purpose** of a specific **Chakra**.

The **Chakra Purpose Current** then moves out through the **Posterior Purpose Lesser Gate** into the outgoing **Chakra Stream**. It is travelling faster than either **Function** or **Wisdom Currents** and acts like an arrow point leading the triple-current **Chakra Stream** to the **Dispersal Valves**.

It disassembles from triple-current formation into single currents in the **Purpose Dispersal Valve** at the end of the **Chakra Stream** in the **Inner Edge of the Soul Layer** and enters the **Soul Layer** to deliver the specific **Chakra’s Purpose** message.

---

### **3A) Anterior Wisdom Node-**

The incoming **Wisdom Soul Pathway** goes into the **Wisdom Node** and begins to increase speed.

50% of the function current in the **Anterior Wisdom Node** splits off and goes through the **Anterior Osmotic Wisdom Gate** on the left side of the **HES** into **Wisdom Corridor** where it maintains pure cooling intentionality as it passes through the **Posterior Osmotic Wisdom Gate** into the **Posterior** where it mirrors the action in reverse.

### **Anterior Wisdom Greater Gate**

After the **Wisdom** energy divides the remaining energy in the **Anterior Wisdom Node** achieves the proper speed and the current shifts from horizontal to vertical

spin. The fast spinning now vertical (clockwise spinning) **Wisdom Current** enters the **Anterior Wisdom Greater Gate** in the **Core Sheath**.

Into the **Core**: the now vertical clockwise spinning **Wisdom Current** has retained the direction of the spin that it had when it was horizontal. The **Wisdom Current** enters the **Core** that is spinning the exact opposite direction as the incoming **Wisdom**. This causes a toroid implosion- this happens when two energies going the opposite direction at incredible speed encounter each other. The reaction is that they then explode outward in a toroid explosion. The intensity of the encounter informs the **Wisdom Current** and creates the generative power of the **Chakra**.

### **3B) Posterior Wisdom Node- “Receptivity Chamber”**

**Informed Wisdom Current** Into the **Posterior Chamber “Receptivity”** through the **Posterior Wisdom Greater Gate**. Here the **Posterior Wisdom Node** blends the cooling energies reserved by the **Wisdom Corridor** and the vertical function energies informed by the **Core** as they slow and incorporate what they have learned from the **Core** transit. As the **Wisdom Current** informed by the **Core** slows, it returns to a horizontal position, is filled with the witnessing and receptive environment of **Receptivity** and prepares to exit the **Receptivity Chamber** as a fully empowered representative of the **Wisdom** of a specific **Chakra**.

The **Chakra Wisdom Current** then moves out through the **Posterior Function Lesser Gate** into the outgoing **Chakra Stream**.

It disassembles in the **Wisdom Dispersal Valve** at the end of the **Chakra Stream** in the **Inner Edge of the Soul Layer** and enters the **Soul Layer** to deliver the specific **Chakra’s Wisdom** message.
