Inflamed Chakra Connectors

This alignment will almost always be needed when major chakra connectors and anchor sets are down or when HEMF issues are present.

What?

An Inflamed Chakra Connector (ICC) will affect both the anterior and posterior r-chakras in several ways under different circumstances:

1. If only one connector is inflamed it will cause the r-chakra to lack vitality of expression by making the spin of the HEMF wheel lopsided in either posterior or anterior of both portions of the r-chakra.
2. If both connectors are inflamed it will cause the r-chakra to stop spinning or to slow down the spin of the r-chakra making it appear weak.
3. If there is severe inflammation on either side- the wheel will become smaller and less potent. This will make the person less capable of bringing the message of this main chakra into fulfillment materially through the delivery system of the r-chakra. This situation still needs this alignment to get back to normal.

The pulses will show an underlying thickness in both the physical and the unified pulse indicating inflammation.

Why?

Inflammation at the connector is one cause and the other is a stopped vortex, which can be caused by accident or injury to any of the affected Systems: the HEMF, the BES, the Harmonizing Network. The core sheath is vulnerable when there is damage by injury, pathology, or accident causing a loss of *Harmonizing Blend*.

The client will have difficulty implementing plans, schedules, and instructions. They will feel somewhat depressed or blue and be experiencing the feelings about life being too hard because of low energy. This can really support a chronically ill person to improve their access to chi. Clients who need this will

usually be functional but getting things done will be a struggle and their dreams will constantly fall short.

How?

Apply only to the ten r-chakras related to both the HEMF and BES. Inflamed Chakra Connectors are treated with this single procedure. Three things will have to be addressed:

a. disconnection of connector in the BES
b. failure of vortices not spinning
c. inflammation of connectors

The recipe for releasing this kind of inflammation is to massage and stimulate the point of origin in both directions addressing both anterior and posterior vortices together. In fact, it is important to always do both. Massage the corridor with light fingers in both directions to sooth the entire chakra connection apparatus affecting both BES and HEMF systems.

Anytime the major chakra is impacted in any procedure the core sheath, which is at center of the major chakras, is potentially impacted. Bringing in *Harmonizing Blend* will ensure the entire chakra and r-chakra continues working effectively.

Sacred Anatomy Energy Medicine Alignment

Inflamed Chakra Connectors

Both issues are treated with the same alignment. Apply only to the 10 r-chakras. Three things will be addressed:

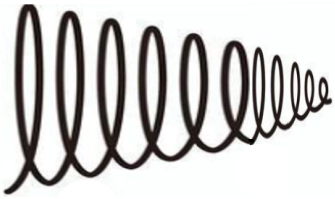

a. disconnection of connector
b. vortices not spinning
c. inflammation of connectors

1. Apply the Edge Practice, with permission, determine need.
2. Determine by dowsing how many chakras are experiencing:
    a. Inflamed Chakra Connectors,
    b. Loss of spin

   c. Disconnection of the connector.

3. Determine by dowsing which BES or r-chakra connectors has:
   a. A connector of the BES chakra disconnected?
   b. An Inflamed Chakra Connector?
4. Start with the chakra reconnection. Correct it before addressing the HEMF vortices and inflammation. To do this, follow instructions for chakra connectors and anchor sets on Chakra Connector Chart. [Note: every dropped connector will result in dysfunction in the associated r-chakra.]
5. Surround the inflamed connectors you are going to work with *ULL*.
6. Reduce inflammation by bringing in *Anti-Inflammatory* and directing it into each affected chakra at the connectors at the point of origin which are located at the side of the chakra.
7. Extend 3 light fingers of both hands: thumbs, index and middle fingers. You will work with both hands for each set of r-chakras, two at the same time.
8. Insert your light fingers into the lowest ↓ affected chakra at the point of origin. With focus and intention to the anterior vortices: twist with three fingers and it doesn't matter which way you twist, as the vorticies will respond, speed up and activate. Keep doing this until both vortices begin firing again. As the vortices fire on both sides they will come around the front and one will overlay the other to create a vortex rosette. Together they are the r-chakra and will continue to move to the outside of the HES in an expanding funnel shape

9. Repeat same action for the posterior vortices: with intention and focus, twist with three fingers and it doesn't matter which way you twist, as the vorticies will respond, speed up and activate. Keep doing this until both vortices begin firing again.
10. If there is inflammation here, it will further reduce at this point. Continue stroking all the chakra connectors until firing of vortices begins in each.
11. Wrap *ULL* around both the major chakra and the accompanying r- chakra.
12. Check for specific and related imbalances. Such as: *Sense of Function, Sense of Wisdom, Organ Vitality of the BES (*or *of the Specific Chakra), Sanctuary* or *Blue Light of Healing*.
13. Bring in *Harmonizing Blend* (to support any potential impact to the core sheath), *Harmonizing the HEMF, Harmonizing the BES* and *Harmonizing the Harmonizing Network*.
14. *Integrate, Blend, Witness, Stabilize, Integrate, Blend*

Check in the session following this procedure to see if there is another submerged chakra issue that can now present for resolution. For example: other connectors dropped, SPC, chakra shadow or chakra plaque. Correcting presenting r-chakras will allow the other ones to show imbalances and disconnections if they are submerged somehow.
