

## Description: Astral Debris

Astrals often have been present in the structure for a period of time. I have seen them in structures for as long as forty or fifty years. When the astral has been removed, sometimes it will leave behind debris from its stay in the HES. The removal of the Astral Debris can be as powerful as the removal of the astral itself. This removal should be considered at the end of each Astral Removal.

SAEM Removal:

## Removing Astral Debris

- 1) Using the Edge Practice with permission determine the need for removal.
- 2) Removal is determined by dowsing for AD Weight (Astral Debris Weight) normal is 12.
- 3) Haz Mat including gloves.
- 4) Triple Sticky Box the HES.
- 5) Rake your Haz Matted light fingers through the entire HES- telegraphing to the debris. This will activate the Astral Debris and ready it for removal.
- 6) Collapse the Removal Box around the Debris like you would do in an EA removal.
- 7) Blast the HES with a weave of *ULL* and *White Light of Cleansing* filling the #2 box.
- 8) Monitor until done.
- 9) Lift this second Removal Box out.
- 10) Check to be sure the AD-Weight is 12.
- 11) Help the client put on their Astral Shield.
- 12) Remove final Rebuild Box along with your Haz Mat Gear.
- 13) Waft *ULL* through the structure.
- 14) *Harmonizing the Layers, Harmonizing the HEMF*
- 15) *IBWSIB*
