

Surgical Support Order of Procedures

Used throughout pre/surgery/post:

Basic Signature ID, Removal, & Attunement
Basic Energy Generator

Pre-Operative Surgical Support

In a pre-surgery session:

- **Use Hazardous Materials Gear** if needed
- **Use Sticky Box Sterile Field** for Astral Removal & pre-surgery containment if needed
- **Assess Astral Weight:** Do Removal if necessary
- **Basic Signature ID** of any related emotions, traumas or issues
- **Removal-** of old drug signatures / other signatures
- **Attunement of current medications** supporting pre-surgery
- **Salt & Soda Protocols-** Bath, Shower, Dry Rub, Foot Soak
- **Pre Op Basic Clearing of Specific Body Part-**
- **Build Up Stamina** with Specific Energies
- **Prepare list of drugs & any implants** : anesthesia list, pain meds
- **Attune before surgery** begins: surgery implants, stents, splints, metal pins, prothesis
- **Establish time** of the surgery
- **Align intention with the client for desired result-**
- **Remove Sticky Box**
- *Harmonizing Energies/ IBWSIB*

Surgery:

- **Follow Holding and Supporting Surgery Protocol--**
- **Determine if surgery type:** Removal, Replacement or Repair
- **Apply Hazardous Materials Gear**
- **Use Haz Mat Tools** as Needed

Holding and Supporting Surgery

1. **With permission** (from client or medical guardian) at the edge.
2. **Build thought form** of the client in safe place
3. **Determine the Astral weight.** Remove astral
4. **Place a sticky box** around the thought form as a sterile field
5. **Connect the TF** to the bio layer of the client-

6. **Record the percentage** of effectiveness of the bio layer & the unified percentage to track the 4 aspects. Draw star point pulse to track surgery
7. **Set up appropriate generators** on a time clock- keep them simple- *ULL/ integration and blending*. Using *organ vitality* (relevant anatomy), *blue light of healing & sanctuary*. No more than 4 or 5. Program generators to increase or decrease potency as needed or to stop- to benefit of the client & surgery.
8. **Support the Surgical Field** with Specific Energies
9. **Check medications list** used during surgery- including anesthesia meds (2-4 drugs woven together)- Attune each med before surgery. Remove one at a time after use. Attune any medications used in surgical procedure- refer to a prepared list
10. **At start of surgery** open HES to receive surgical cut- part it with *surrender* using knife light fingers.
12. **Hold the Human Energy Structure open** with *ULL* (Let it go at end- help sutures to hold & body heal
13. **During surgery create generators** as needed
14. **Use the star point pulse** to track the surgery to determine when it begins and when it is over
15. **At surgery conclusion- seal the wound & structure** using: *ULL, rejuvenation, sense of function, blue light of healing & sanctuary*.
16. **Attune anything used to close the wound** or shore up the body such as: net, metal plates, pins, staples, stitches or stents, any replacement parts.
17. **Do blood transfusions protocol if needed**
18. **Orthopedic surgeries**-rebuild with *Archangel Raphael, anti-inflammatory* into joint capsules.
19. **Bring in organ vitality** (of affected organs, systems & structure- whole body) - *recreate & rejuvenation*.
20. **As a standard protocol**- build *integration & blending* generators- run for 48 hours after surgery
21. **Do ending protocol** after you know the surgery is complete-
22. **Remove Sticky Box**
23. **Harmonizing Energies/ IBWSIB**

Removal Surgery Protocol

1. **Signature removal**- Remove the signature of the trauma or malfunction.
2. **Encapsulate the problem**-Determine the location of the tumor, organ, injured part or cyst that is being removed and encapsulate in *ULL*. If cancerous or toxic encapsulate with hazmat.
3. **If the surgery has not yet occurred** lift encapsulation out prior to surgery.

4. **Remove by lifting out the encapsulation-** If the surgery has already happened-remove encapsulation after the fact. Lift out the energy signature of removal with trauma of surgery.
5. **Also lift out the signature of the encapsulation** - Remove a damaged organ, bone, or part at the same time as the surgery is less traumatic. Intervention BEFORE surgery -for tumors, cysts& scar tissue
6. **Bring in ULL** into the hole remaining and coat the area in *ULL*
7. **IBWSIB**
8. **Follow up** by bringing in specific energies to correct imbalances.
9. **IBWSIB**

NOTE: do not remove surgical trauma signature until surgery is over. That will be when post op begins.

Replacement and Repair Surgeries

1. **With permission** & Edge build a thought form of the client
2. **Place the thought form** in a sticky box and put on hazmat gear.
3. **As needed**, do signature removals of the trauma, injury & any earlier related surgical trauma.
4. **Attune parts** (pins, screws, stents, mesh, plates, joints) as needed.
5. **Surround all attuned parts**, the area of the repair or replacement with liberal amounts of *ULL*
6. **Bring in energies** such as: *blue light of healing, sanctuary* and *complete release* as needed.
7. **Bring in the rainbow light** for the replaced part & the repaired anatomy. Stroke as you are bringing it in- soothing with each pass.
8. **If the surgery is to put in a replacement part** bring in *organ vitality* for part replaced AFTER it is attuned- this will instruct the metal to behave as human bone, cartilage & flesh & to accept the connection to the bone. It will also allow the bones to accept the metal as skeletal structure. This is a critical point. Bring in loads of *ULL* while you are doing this as well as any other needed energy. Speak to the foreign substance like this: "*Titanium hip, please behave as if you are human bone to the benefit of client's name & in service to the fulfillment of their soul's purpose & highest good.*"
9. **Bring in concluding:** *ULL & Harmonizing the Layers & Harmonizing the BOL.*
10. **IBWSIB**

NOTE: Do not remove surgical trauma signature until the surgery is over. This is the start of post op.

Post-Surgical Care:

- **Use Sticky Box** as sterile field to be extra safe
- **Hazardous Materials Gear** to be safe
- **Assess Astral Weight**- do needed removal

Post-Operative Support Techniques:

Post-operative support best personalized to each situation.

1. **Be specific:** remove the signatures
2. **Remove the signature of the surgery:** shock, trauma
3. **Keep generators up and running** - 6 weeks after surgery- Check generators every 3- 4 days
4. **Doing a clearing of the specific body part**
5. **Rejuvenating and restoring energies** are very helpful in recovery from surgery.
6. **Salt & Soda Protocols:** Bath, Shower, Dry Rub, Foot Soak when needed
7. **Use the appropriate** *Harmonizing Energies*
8. **IBWSIB.**
9. **Remove Sticky Box**
