An Eco-Friendly Foundation

Sustainability is a core value for Intel, and upgradable, repairable, and reusable Intel® NUC products are leading the way.

Reimagining sustainable computing

Sustainability is built into every stage of the Intel NUC product life cycle—including product design, manufacturing, packaging, customer use, and returns.

Sustainable design and build

Many Intel NUC products are made from recycled plastics and built with low-temperature solder for approximately 25 percent energy savings.

Sustainable shipping

Compared to larger PCs, the small size of Intel NUC products saves big on shipping, warehousing, and cooling costs.

Sustainable packaging

The latest Intel NUC product packaging—including box, liners, and paperwork—is recyclable or reusable in secondary markets.

Sustainable returns

When an Intel NUC product is returned, every attempt is made to recycle it, repurpose it, or repair it as part of the Return Material Authorization (RMA) Program.

Intel NUC Sustainability Achievements

99.5%

of all Intel NUC returned material (by weight) was kept out of landfills in 2021.³

95%

of all Intel NUC packaging was designed to be recyclable or reusable in 2021.
