

Watch Strap Installation Guide

1. Locate the spring bars on your watch case.
2. Align the new strap's holes with the spring bars.
3. Using a spring bar tool (or small screwdriver), gently compress one end of the spring bar and slide it into the strap hole.
4. Repeat for the other side until both ends click securely.
5. Gently tug the strap to confirm it's properly attached.

Tip: Work on a soft surface to prevent scratches.

For leather straps, ensure proper orientation before installation.
