

“ There are hidden compromises built into fuel and oil additives. But, what would happen if a development team were tasked with creating products that must only use the very best technologies and components regardless of cost? **Well, now we have.** ”

# Oilsyn®

## Petrol Power DNA Next Generation Gasoline Fuel Conditioner

Powerful Multiple Active Ingredients and Functions. Compatible with E5, E10, E15 Gasoline fuels, Port Injection, Gasoline Direct Injection (GDI) and Hybrid Engines.

PROPRIETARY  
TECHNOLOGY

POWERFUL  
CONCENTRATED  
FORMULA

Governmental legislation has driven an advance in engine and emission control technologies but fuel quality has not kept pace and is left lacking. Sensitive fuel systems combined with an increase in stop/start driving raises the risk of deposits in the fuel system, engine, gasoline particulate filter (GPF/OPF) and catalytic converter (CAT). Such deposits can affect

engine performance, fuel economy and exhaust emissions. Excessive build-up can trigger engine warning lights and restrictive limp-home mode.

Petrol Power DNA delivers a proprietary combination of detergents, lubricant, stabiliser and combustion improvers to turn regular petrol into a premium fuel.

PEATECH  
DETERGENT  
PACKAGE

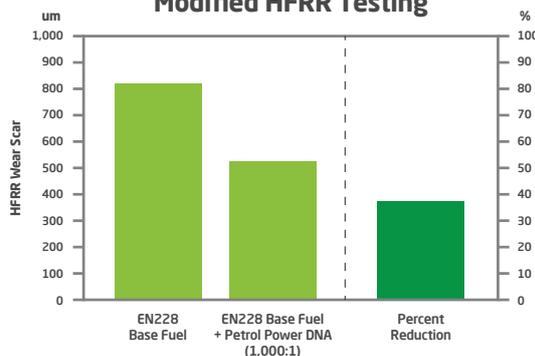

Petrol Power DNA restores available engine power by safely minimising deposits to the fuel system, combustion area, port and GDI inlet valves, gasoline particulate filter, turbo, O2 sensor and catalytic converter.

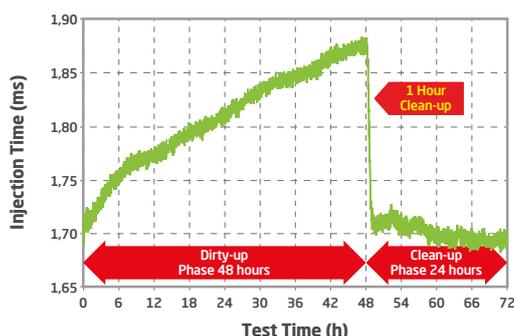

ORISYN  
LUBRICATION  
TECHNOLOGY

Oilsyn's Orisyn polymeric lubricant and friction modifier ensures the fuel system and upper engine parts remain protected during the cleaning process. The advanced lubricant, detergent and fuel stabiliser protects the engine against the adverse effects of bio ethanol content in fuels.

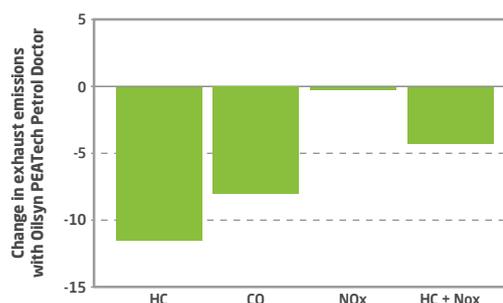

Modified HFRR Testing

GDI Relative Injection Performance

Exhaust Emissions Reduction

## Petrol Power DNA

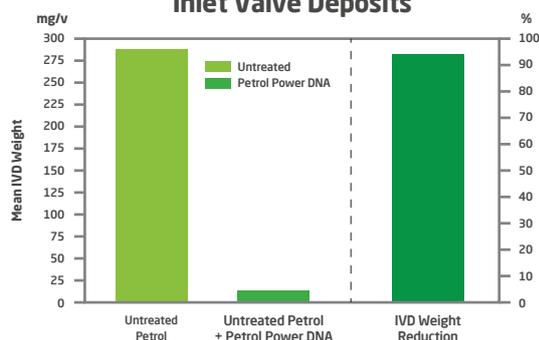

### Next Generation Gasoline Fuel Conditioner

Petrol Power DNA is suitable for all petrol engines running pump specification gasoline including cars, motorcycles, generators and machinery. Petrol Power DNA is suitable for 2-stroke engines with separate oil supplies but not those running premix.

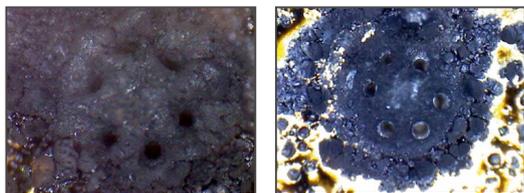

#### ECE 15 Emissions Test Cycle

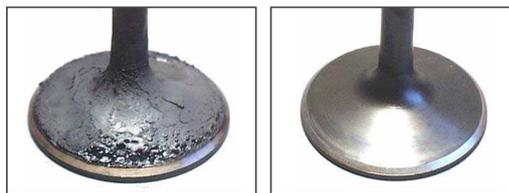

#### MB M102E Keep Clean Inlet Valve Deposits

#### Injector Nozzle - Before and After

#### Piston Valve - Before and After

#### FUNCTIONS

#### BENEFITS

#### Directions

Remove seal, pour required amount into fuel tank and then add fuel.  
Use 1 part Petrol Power DNA to 1,000 parts fuel (1:1,000).  
1ml treats 1 litre of fuel. Use continually for best results.

#### Packaging

100ml, 500ml, 1L, 5L,  
and 200L Drums.
