

The all-new **Chirp +4** with **AI-powered** scan data interpretation

First-ever castable sonar with expert trained **AI**.

CHIRP+ 4, enabled by expert-trained AI, detects and accurately identifies what's noise and what's fish. This eliminates guesswork, especially in situations where interpreting sonar readings can be difficult.

Mapped by the user. Powered by **AI**.

Automatically identify which readings are fish and see them clearly on the 3D map, removing the need to interpret raw sonar signals.

Discover bottom structure and vegetation built from your own precise sonar data and locate the most productive fishing spots.

Choose between 3 beam widths and explore the bottom structure in rarely seen clarity with whichever option suits your needs.

View bottom features like structure, depth, hills, and slopes in 3D with exceptional clarity.
