

Android Enterprise Essentials:

The easy, affordable way to protect your mobile devices and their data

A new solution for modern threats

Mobile computing has had a huge impact on the way we do business, giving employees access to the data and apps they need to do their jobs from anywhere. While this can be great for productivity, these devices are easily stolen or lost and often completely unprotected — opening your business up to costly and time-consuming threats like theft, phishing attacks, and viruses.

For years, small- to medium-sized businesses have had to choose between resource intensive mobile device management that may be too complex for their needs or limited to no protection.

Until now.

Introducing Android Enterprise Essentials

Built by the Android team at Google, Android Enterprise Essentials is a simple and secure management solution for protecting business devices and data. It's the right protection at the right price.

Essentials makes securing and managing devices a breeze. Critical features are applied automatically, making it easy to protect your mobile devices and critical data. Devices can now be set-up with security policies over the air, and sent directly to your employees — just open the box and employees are ready to go. All of this viewed and managed via an easy to use centralized portal. And it all comes at an affordable price, with no additional IT investment required.

Automatic security

- Remotely wipe lost or stolen devices
- Enforce a screen lock
- Ensure persistent policies even if a device is factory reset
- Malware protection that's always running in the background
- Prevent side-loading of apps

Instant setup, easy management

- Streamlined, remote set up of devices
- Policies enforced automatically, no user intervention necessary
- View and manage active devices through a streamlined portal
- Reset screen locks from afar

Small investment, big rewards

- Affordable protection for all your mobile devices and their data
- New devices added automatically after purchasing from a reseller
- No training or additional resources required

android

Built by the team that knows mobile best

Essentials is designed and built by the Android team at Google, guided by their deep experience creating secure and helpful solutions for organizations. They've put the needs and realities of small- to medium-sized businesses first to create a streamlined set of security and management defaults at a price that won't break the bank.

Comprehensive, scalable security, applied automatically

It only takes a minute to get started, with instant set up and simple management as you scale.

1

Sign up for Android Enterprise Essentials at the point of sale.

2

Instant deployment — just open the box and employees are ready to go.

3

View and manage all your devices from one centralized, easy-to-use portal.

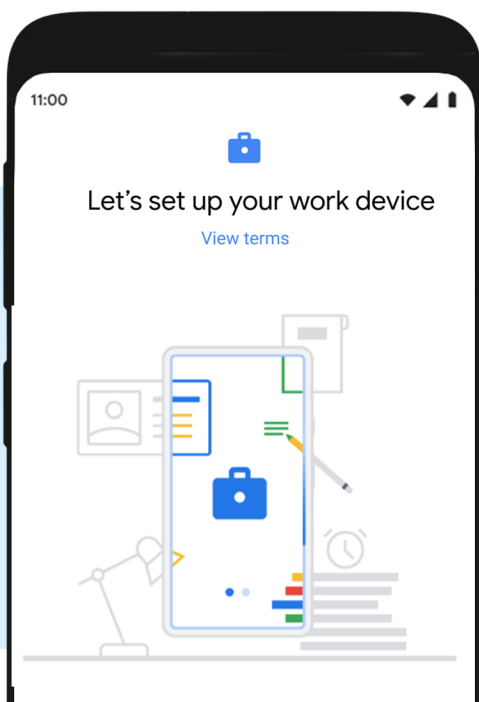

4

Take immediate action from anywhere if any devices are lost or stolen, or if an employee forgets their PIN.

With Android Enterprise Essentials, you can rest easy knowing your mobile devices and data are protected at all times — no matter where the road leads.
