

MegaBinder LRV DTR

TS1708-001 MegaBinder LRV DTR

The MegaBinder LRV is an end-of-row retrieval system designed specifically for collecting agricultural plastics in a format that allow users the capability to create transportable ready-to-load rolls. Whether you are maximizing transportation efforts locally to a recycler, or direct container loading, this comprehensive retrieval system creates uniform, dense rolls of used agricultural plastic.

Multiple lines of material can be retrieved simultaneously while additional lines are being fed into the growing roll of wound product during retrieval. This allows continuous operation of the machine, and a very efficient retrieval process. A tensioning system is incorporated into the traverse head helping to create very tight dense rolls, while simultaneously cleaning trash and shedding liquid from the discarded material.

Roll densities are equal to, or greater than, those obtained by other densification techniques, such as baling. Since there is no need for any additional compacting, overall collection costs are greatly reduced. Rolls are “container-ready” after the initial field collection. Combining the retrieval and densification operations creates a highly efficient process that is less expensive and safer than multi-step systems such as collection and baler compacting.

FEATURES

- Collected material is hydraulically ejected from the winding arbor and onto the bed for transporting.
- Drip tape rolls are average 800-1200lbs.
- Collect Fume Film, Mulch and Drip-tape.

INCLUDES

- 20hp Honda Gas Engine.
- 30gal. Hyd. Reservoir.
- 7gal. Fuel Reservoir.
- Integrated Safety shut off Switch.
- Dual HD Torsion Axels.
- DOT Tow Package with 2-5/16” Hitch. Gooseneck or Bumper Pull.

Mulch

Drip-tape
