

Universal Retrieval Heads

The Universal Retrieval Head from Andros

For years the Universal Retrieval Head from Andros has allowed your growers to retrieve drip tape in a cost effective and efficient manner! And now this highly successful machine has been completely redesigned to more effectively serve the full range of potential users, both large and small. The modular design allows users to select a system that best meets their needs in terms of capacity and price.

From a low cost and simple tape winding system with manually guided lay-up, to our largest unit with auto-wind and tension control systems. All models start with the same base unit and can be upgraded to any of the more sophisticated units using a unique system of interchangeable components.

The Universal Retrieval Head maintains the Andros tradition of designing and building highly robust machines using technology appropriate to your users. Now you can grow your potential market by offering a wider range of pricing and options to your customers.
