

UltraCoiler Jr.

CR1002-001 UltraCoiler Jr.

The UltraCoiler Jr. retrieval system from Andros provides hose users a dependable and cost effective method of retrieving hoses in above ground, heap-of-leach retrieval applications. Dependable, because the simple design guarantees uniform performance under a wide variety of operating conditions, and cost effective, because the rugged frame and robust components provide years of trouble free operation.

Available as hydraulically driven using the tractor's auxiliary hydraulic system, (compatible with either open or closed center tractor hydraulics), or with it's own PTO driven power-supply. Both versions include speed control valve, hoses, quick-connect fittings for attachment to tractor hydraulics (aux. version), or 540 RPM driveshaft, (PTO driven version).

Heavy duty polyethylene side flanges protect operator from rotating coil, and a hand operated levelwind system provides a simple cost effective method to make uniform tight coils. Precision bearings in the carrier assembly insure long life. The UltraCoiler mounts to any tractor's 3-point hitching system.

Contact your local Andros dealer to find out how you can use these, and the entire Andros line of Mining.
