

AnswerForce Integration with Autotask

This document explains the process of integrating AnswerForce with Autotask along with screenshots, making the integration easy to perform. Autotask is listed under the Integrations module of AnswerForce.

Here is the image of listing -

Step 1 -

Select 'Autotask' from the integration options.

Step 2 -

On Selecting Autotask, you will see this screen. Click on the 'Integrate' button on the left.

Step 3 -

This is a Trigger Selection Step. Select the most suitable option, and click continue.

Step 4 -

You will see a popup, where you need to enter your username & password. This is an Autotask Account Adding Step. Once done, click 'Continue'.

Step 5 -

It will again go to the account list where you can see the recently added account, you can rename if you want. On clicking continue from there will land on Autotask's module selection part. Select 'Create Ticket' module, and then click 'Continue'.

Step 6 -

You will be taken to the mapping Setup window. This is a provision to choose what value should be there in Autotask fields, whenever we do call intake.

	Freshsale	Test	Lookup Data (Lookup enables to load corresponding data for answering service)	
		 Filter	Ticket Department Name OR Ticket Queue Name*	Ld
	Keap		Ticket Description	
8	Export you		Continue	ow

Choose the field which is configured as 'dropdown' in script end

Check the box for Lookup data. Enabling the lookup will ensure that, whenever we do call Intake, under the configured dropdown field, we will list the actual accounts that belong to Autotask. And in, call intake dynamically we can choose the accounts.

Then, click on 'Continue'.
