

Policy and Coordination

Breakout Group

Prioritization of Research Needs

By need

1. Building codes/energy policy
2. Energy education and communication
3. International examples
4. Public/private partnerships

By Feasibility

1. Building codes/energy policy
2. International examples
3. Energy education and communication
4. Public/private partnerships

Research Need being addressed here

- Data that need to be generated
- Building codes are already in process (not much needed on the data side). Energy policy should be tagged to this and this is also in development.
- Energy education needs: REAP is covering this approach. Need to talk to them re: needs
- International information needs: on both technology and approach to heat utilities
- Public Private Partnerships: see efforts recommended in draft Barriers report and Affordable Energy Strategy

Research Need being addressed here

- Strategy to address:
- In several of the recommendations, there are efforts in progress
- International information: this is a great opp for a graduate student project or a contracted study via ISER or other similar group, also AEA if it aligns with research needs. Also consider Arctic Council funding/project?

Research Need being addressed here

- Appropriate group(s) to implement effort
- CCHRC and AHFC
- REAP
- University, AEA, ANTHC, REAP
- AEA, ACEP, regional corps., others
- Potential Funding Sources
- Funding: DOE has a program through IE program (requires a 50% match). There is also \$ available for policy efforts, as it applies to tribes. Would need to partner and ANTHC/housing authorities. Potentially Denali Commission if future \$ is received.
- DOE, in general.
- Regional corporations?
- USDARD and RUS
- AEA Alternative Energy program
