FLIP-CHIP ADJUSTMENT

Spinning 180 degrees the Flip-Chip and the transition spacer allows a 10mm horizontal reach adjustment.

As per article 1.3.023 of the UCI technical regulations, The distance between the vertical line passing through the bottom bracket and the extremity of the handlebar may not exceed 75cm. The distance can be increased to 80cm for morphological reasons and to 85cm for riders 190cm tall or taller.

The table show the distance between handlebar extremity and bottom bracket on various frame sizes (with the flip-chip in the forward position).

Make sure to verify that your configuration meets the UCI regulation.
