## Ableton Live Download Session for Orba

Requirements:

• Ableton Live 10 or newer (Intro/Standard/Suite)
• Orba App (0.14.7 or newer)

How To 🧐 :

1. Open the Ableton Live session and connect Orba to your computer.

2. Open Live's Preferences menu, select the *Link / MIDI* tab and check that the *Track* and *Remote* columns are active for the corresponding Orba channels.

3. In the Orba app, make sure that *Channel-per-part* is selected under *MIDI Mode*.

4. You may wish to disable Orba's internal synth while using Ableton Live. Toggle *Orba Sounds On/ Off* if so.
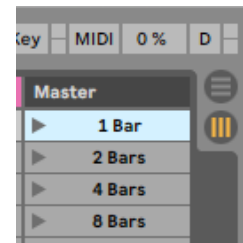

Playing / Looping 🔊:

Orba will be ready to play once all settings have been adjusted. Switching modes on Orba will cycle through the corresponding tracks / software instruments in the Ableton Live session.
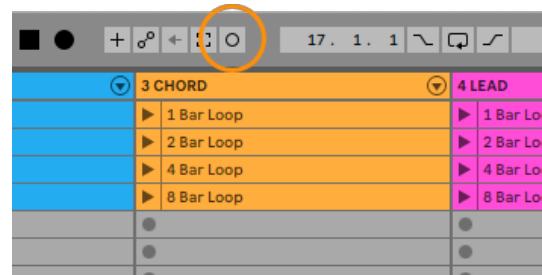

Make sure that all tracks remain armed, otherwise they won't respond to input from Orba. A track is armed when the *Arm Recording* icon is red.

To loop using Ableton Live's looper select one of the scenes in the Master channel on the right side of the session. Selecting a *1 Bar* scene will set the recording length to a single bar. A *2 Bar* scene will be 2 bars, etc.

When you've selected a loop length and are ready to record click the *Session Record Button* in the top-middle of the session. Live will start recording on all 4 tracks and continue looping until you press Stop.

You can also use Orba's built-in looper to trigger sounds in Ableton Live.
