

RégéTech U

Universal Additive for particulate filter (DPF)

VERSION 1 - JUNE 2023

WWW.MECATECH-PERFORMANCES.COM

DEFINITION

1. RégéTech U is a universal combustion catalyst additive that optimizes the regeneration of Diesel engines Particulate Filters (DPFs).
2. It replaces all original DPF additives from car manufacturers, without distinction of year or manufacturer, regardless of their generation (1, 2, 3, or 4).

BENEFITS

1. Universal formula compatible with original OEM additives.
2. Simpler and more economical usage than the original product (OEM).
3. Cleans and regenerates Diesel Particulate Filters (DPF)
4. Allows a level of performance equivalent to the manufacturer's product.
5. Reduces carbon soot and fine particle numbers.
6. Reduces saturation, keeps clean and extends DPF life.
7. Accelerate by 3 the regeneration and depollution performance of the DPF.
8. Reduces maintenance costs.
9. Applicable to all diesel engines and fuels, complying with the latest requirements against pollutant emissions.

PROPERTIES

1. Physico-chemical characteristics strictly equal to the manufacturer products (% of organometallic agent, viscosity, etc ...)
2. Contains an organometallic agent combustion catalyst allowing removal at lower temperature of carbon soot (360 ° C against 550 ° C without additive)

DOSING AND APPLICATION

- Filling of the original additive tank (OEM): follow the recommendations provided by the vehicle manufacturer.

SECURITY DATA

1. Consult the SDSs of the products available on our www.mecatech-performances.com site.
2. Professional use.

PACKAGING

1. Packaging: 1 L plastic Can / box of 12
2. Art. number : MT759
