DV & VL SERIES

SOFT SEAL PISTON VALVES

ORIGINAL STRAHMAN RAM-TYPE DRAIN VALVE

FEATURES

- Quality System Registered to ISO 9001:2008 Certif cate #003264
- Valve flanges meet the requirements of ANSI B16.5
- All valves manufactured in accordance to ASME/ANSI B16.34 standard
- All Valves 100% Leak Tested for bubble tight shut-off
- Vacuum pressure tested to 28 vacuum inches of mercury (0.94 PSIA) upon request
- Strahman 1-inch to 6-inch 150, 300, & 600 Class ANSI drain valves qualify by design to API Fire Test for Valves
- 3/16-inch RF on the inlet f ange for mating to Strahman drain valve nozzles, adapters and inserts.
- 45° and 60° straight neck discharges are standard
- · Packing Materials:
- Teflon rated -328°F (-200°C) to 450°F (232°C)
- MR to 650°F (343°C)
- Graphite rated to 1000°F (538°C)
- TFM 1600 rated -328°F (-200°C) to 450°F (232°C)

AVAILABLE SIZES

- 1-inch, 2-inch and 3-inch, 900, 1100 and 1500 Class ANSI RF flanges*
- 1-inch through 6-inch 150, 300 and 600 Class ANSI RF flanges*
- 8-inch, 10-inch and 12-inch, 150 and 300 Class ANSI RF
- Optional f anges include DIN, British Standard, JIS, ANSI RJ, flat face and quick disconnect*

AVAILABLE OPERATORS

- Manual Handwheel
- · Gear Operator
- Air Cylinder (with or without external switches)
- Hydraulic Cylinder (with or without external switches)
- Motor (electric or pneumatic) with external switches
- Multi-turn Electric Rotork motor with internal switches†
 - * For 316 and 316L stainless steel pressure and temperature ratings see the tables below. For all other sizes and materials consult Strahman direct.
- † Other multi-turn operators available upon request.

CAUTION

When a Strahman adapter is not supplied with the drain valve, or the customer's nozzle does not have a piloting recess, the nozzle bore must be 1/4" larger than the piston diameter. This clearance prevents the piston from scoring on the inside of the nozzle which could cause the valve to leak.

^{*} Strahman piston extensions are measured from the height of the RF for an ANSI standard f ange. For ANSI 600 class valves the extension is equal to the actual RF provided by Strahman. For ANSI 150 and 300 class valves the ANSI standard RF height is \(\frac{\pi}{6} \)" while Strahman provides \(\frac{\pi}{6} \)" height for piloting as standard. Customers can request a \(\frac{\pi}{6} \)" RF height for RF-to-RF f ange installation and the piston extension will equal the actual distance from the RF. For the Strahman standard (\(\frac{\pi}{6} \)" height) the distance measured from the RF to the tip of the piston will be \(\frac{\pi}{6} \)" less than the description. Example: 2" ANSI 150 Drain Valve with 6" piston extension will measure 5 \(\frac{\pi}{6} \)" from a standard Strahman RF to the tip of the piston. Piston extension tolerances tighter than \(\frac{\pi}{6} \)" available upon request.

6"	46 1/8"	6"	4.921"	13 %"	18 1⁄4"	14"	18"		

^{*} Strahman piston extensions are measured from the height of the RF for an ANSI standard flange. For ANSI 600 class valves the extension is equal to the actual RF provided by Strahman. For ANSI 150 and 300 class valves the ANSI standard RF height is ½6" while Strahman provides ¾6" height for piloting as standard. Customers can request a ¼6" RF height for RF-to-RF flange installation and the piston extension will equal the actual distance from the RF. For the Strahman standard (¾6" height) the distance measured from the RF to the tip of the piston will be ½" less than the description. Example: 2" ANSI 150 Drain Valve with 6" piston extension will measure 5 ½" from a standard Strahman RF to the tip of the piston. Piston Extension tolerances tighter than ½" available upon request.

^{*} Dimensions G, H, L are for Air-Operated Drain Valves. For Hydraulic Drain Valve dimensions, please consult factory. Strahman piston extensions are measured from the height of the RF for an ANSI standard flange. For ANSI 600 class valves the extension is equal to the actual RF provided by Strahman. For ANSI 150 and 300 class valves the ANSI standard RF height is 1/6" while Strahman provides 3/6" height for piloting as standard. Customers can request a 1/6" RF height for RF-to-RF flange installation and the piston extension will equal the actual distance from the RF. For the Strahman standard (3/6" height) the distance measured from the RF to the tip of the piston will be 1/6" less than the description. Example: 2" ANSI 150 Drain Valve with 6" piston extension will measure 5 /6" from a standard Strahman RF to the tip of the piston. Piston Extension tolerances tighter than 1/6" available upon request.

3" and Larger Valve Body Deck

CAUTION

When a Strahman adapter is not supplied with the drain valve, or the customer's nozzle does not have a piloting recess, the nozzle bore must be ¼" larger than the piston diameter. This clearance prevents the piston from scoring on the inside of the nozzle which could cause the valve to leak.

^{*} Strahman piston extensions are measured from the height of the RF for an ANSI standard flange. For ANSI 600 class valves the extension is equal to the actual RF provided by Strahman. For ANSI 150 and 300 class valves the ANSI standard RF height is $\frac{1}{6}$ " while Strahman provides $\frac{3}{6}$ " height for piloting as standard. Customers can request a $\frac{1}{6}$ " RF height for RF-to-RF flange installation and the piston extension will equal the actual distance from the RF. For the Strahman standard ($\frac{3}{6}$ " height) the distance measured from the RF to the tip of the piston will be $\frac{1}{6}$ " from a standard Strahman RF to the tip of the piston. Piston extension tolerances tighter than $\frac{1}{6}$ " available upon request.

TECHNICAL AND GENERAL INFORMATION

FEATURES

- Extended body for f ush connection to the process
- Combinations of extended body and extended piston
- Outlet angles to customer requirements
- · Integral welded jackets
- Extended stuff ng box with live loaded packing
- Inlet or outlet f anges in different sizes
- Connection f anges to any standard or custom design
- Custom made port sizes to optimize f ow
- · Wide range of metallurgy available

DESIGN CODE AND CONSTRUCTION

- Design standard compliant with ASME B16.34
- International standards include ANSI, DIN, JIS, API etc.
- Wide range of material selections including carbon steel / stainless steel / Titanium / Hastelloy / Duplex / Monel / Tantalum / Zirconium
- · Fabricated, cast, forged and bar stock designs
- Combinations of fabricated, sand and investment castings, and bar stock available

SURFACE FINISH

 For polymer applications, United Process Valves recommends a surface f nish of 300 (Ra 0.4) for all parts are in contact with the medium

QUALITY ASSURANCE AND TESTING

- ISO 9001 compliant
- PED / ATEX / CE marking
- TUV / HPO / SO 15848 1 & 2, low emission certification available
- Standard testing procedures

DANCE DEFINITION

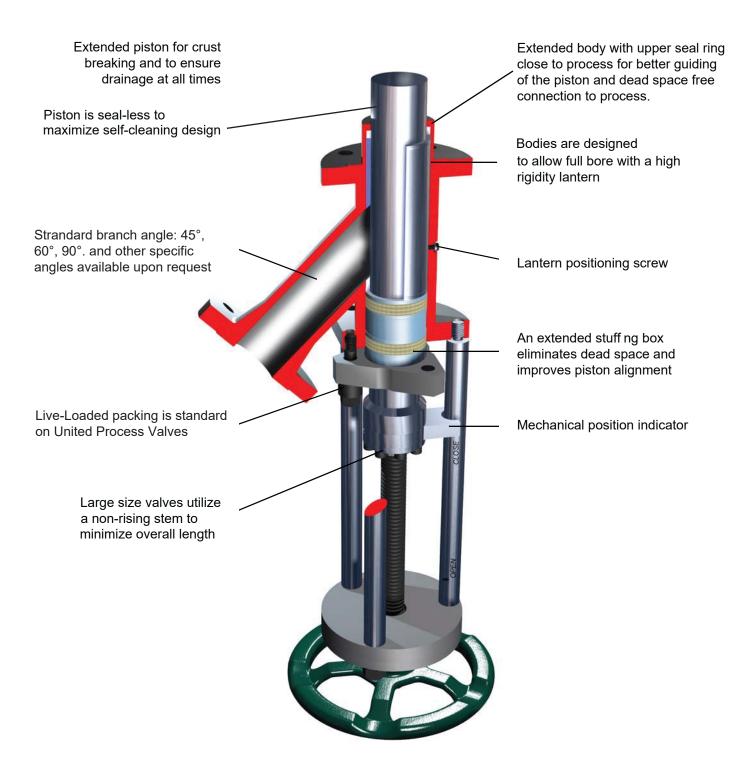

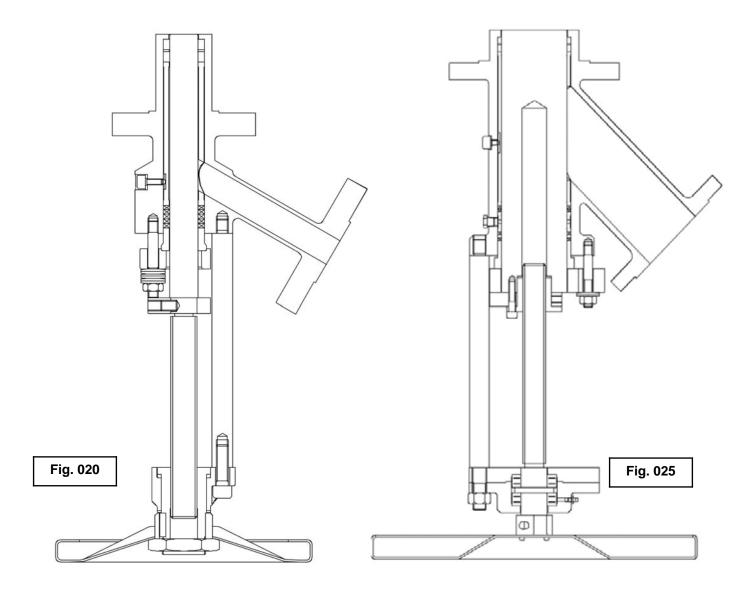

Fig. 025S

BODY ARRANGEMENTS

The United Process Valves VL series uses the following two stem designs:

- Figure 020 for small piston sizes to approximately 25 mm (1") uses a rising stem design
 Figure 025 for piston sizes 32 mm and larger uses a non-rising stem design

SEALING SYSTEM

Soft Seal- The Soft Seal

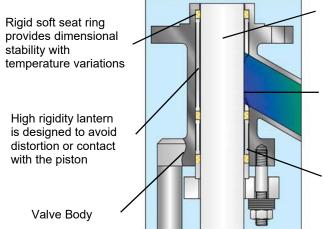

is a seat-less sealing system that assures superior performance. While closing, the plunger moves through the valve bore and effectively rods any remaining product out of the valve.

<u>Temperature</u>

Min: -50° C / -60° F Max: 200° C / 1000° F

Pressure

Max: 100 bar / 1450 psig

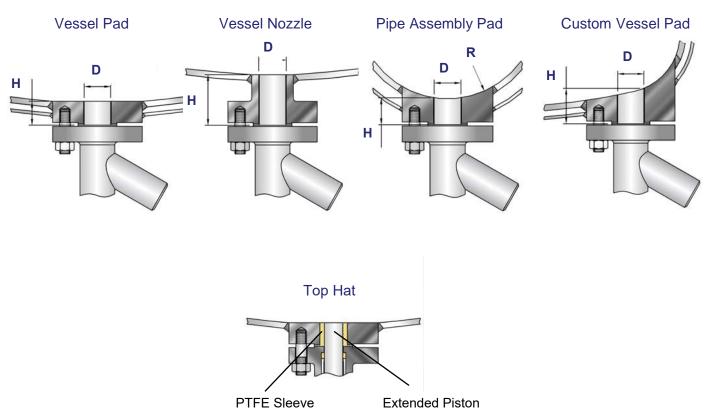

Greater piston hardness resists scratches that are the primary cause of damage to the seal and resulting in leakage

A second lantern gland packing arrangement improves piston guidance and minimizes retention areas

The standard live loaded packing arrangement avoids over-compression of the upper seal ring while the valve is in the open position

VESSEL CONNECTIONS

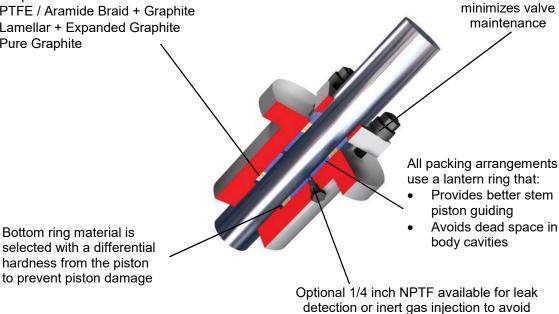

To connect valves to existing vessels or reactors, there are two possibilities: a nozzle or a pad connection. In both cases, the customer must specify the following vessel connection details: $^{\circ}$ D $^{\circ}$ (inside diameter), $^{\circ}$ H $^{\circ}$ (height), DN (nominal size), PN (pressure rating) and connection standard (ISO, ANSI, DIN, etc.). To eliminate retention areas radius $^{\circ}$ R $^{\circ}$ can be specified for optional contouring. For new projects United Process Valves can supply valves with easy-to-fit standardized pads that are ready to be installed.

PACKING DEFINITION

- · Combinations of fabricated, sand and investment casings, and bar stock available

Surface Finish

• For polymer applications, United Process Valves recommends a surface finish of Ra 0.4 for all parts are in contact with the medium

Quality assurance & testing

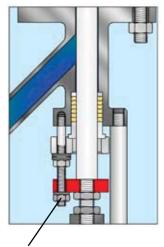

- ISO 9001 compliant
- PED / ATEX / CE marking
- ISO 15848 1 & 2, low emission testing and certification available
- Standard testing procedures

PISTON LOCKING DEVICE

Many times safety regulations require an additional locking device to keep a valve closed United Process Valves offers the following solutions:

Arrangement A
Special half pipe blocks the stem within top works and prevents valve from stroking

Arrangement B
Extended stuffing box bolts
provide locking with
special position indicator.

Arrangement CLockable handwheel cover.

TEMPERATURE PROBE IN THE PISTON RTD SENSORS

A bottom valve is located right in the middle of your process. For this reason, an optional temperature probe installed in the piston will provide you with temperature information without the need of any extra nozzle or reactor modification.

For temperature sensitive processes, United Process Valves offers piston-mounted single or dual Resistance Temperature Detectors (RTDs). The standard RTD unit has a platinum element and is available in materials to match the wetted parts of the drain valve.

Drain valves with RTDs provide several advantages over traditional thermocouples. Temperature sampling and vessel draining can be done from the same vessel nozzle. Since the drain valve is typically mounted to the bottom of the vessel, the location of the RTD at the end of the drain valve piston allows for a better temperature reading than a thermocouple mounted above the vessel agitator. RTDs provide a more stable and repeatable operation than thermocouples.

Each RTD equipped drain valve is complete with a bonnet-mounted junction box. The signal output of a RTD can be connected to a computer or data collector. An optional valve mounted temperature transmitter is also available.

Single or Double PT100 Temperature Probe. Ex-proof or standard. Temperature range: -50°C / 400°C -60°F / 750°F

Piston Mounted RTD Sensor

MULTI POSITION AND BOTTOM VESSEL SAMPLING OPTIONAL CRUST BRACKING AND SAMPLING POSITION

An option exclusive to soft seal piston valves is the multiple piston position. This particular arrangement allows to move the piston while still sealing between process and outlet. This way a Tank Bottom valve becomes a multi-purpose tool.

- 1. The ram can extend into the tank (Fig. 1). This breaks through any crust or build-up that may form on the tank bottom. The normal piston position is f ush with the tank bottom.
- 2. The piston completely fills the valve bore so the valve cannot clog.
- 3. As the valve opens, the piston retracts (Fig. 2). Before the drain valve opens, the piston clears the insert ring/flange and a sample can be taken.
- 4. After taking the sample and closing the sampling valve, the piston continues to retract until the drain valve opens and drains the tank. (Fig. 3)
- 5. After draining the tank, the ram valve can be closed. The piston extends through the insert ring/flange and into the tank removing all material.

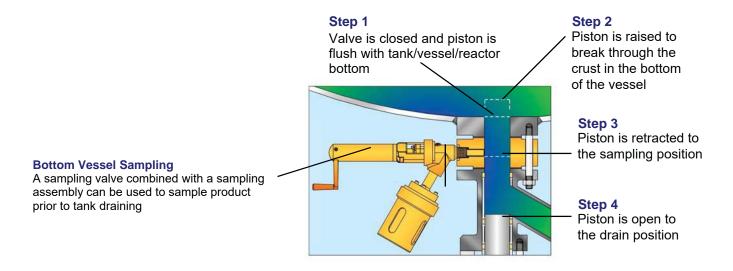

Fig. 1 - Drain Valve Fully Closed

The Strahman United Process Valves products include:

PISTON TYPE SAMPLING VALVES

Strahman United Process Valves has a full line of sampling valves that produce live samples without exception. Our sampling valves unique design prevent failure caused by sediment or clogging.

PISTON TYPE DRAIN VALVES

Strahman United Process Valves Drain Valves are designed to prevent clogging. They are ideal for use in liquid and gas service or with slurries, polymers, and high viscosity fluids that tend to solidify at room temperature.

PISTON & DISC TYPE IN-LINE VALVES

Strahman United Process Valves Piston and Disc Type In-Line Valves alternative to a failing ball, plug or gate valve. With a wide range of positive sealing systems like M Seal, M Ring Seal and M Control, these valves provide superior in-line tightness. When opening the piston or disc it retracts completely into the valve body providing an unrestricted full flow

PISTON & DISC TYPE DIVERTER VALVES

Strahman United Process Valves Diverter Valves are designed to divert process flows with high and low viscosity. The are dead space free to prevent clogging. They are ideal for use in liquid and gas service or with slurries, polymers, and high viscosity fluids that tend to solidify at room temperature.

SINGLE & DOUBLE DISC SLAB GATE VALVES

Strahman United Process Valves Single & Double Disc Slab Gate Valves are specifically designed for use in transfer line and decoking valves for ethylene cracking units and isolation applications in FCCU (fluid catalytic cracking unit) and DCU (delayed coker unit) plants. The safety and continuous production of process plants often depend on the reliability of these "key-equipment" valves.

LINE BLINDS

Strahman United Process Valves Line Blinds provide zero leakage down stream and total isolation on process pipelines, vessels, and maritime applications. No pipeline movement is required when blind position is changed.
