Simplified business structure post demerger

Board has already approved evaluation of further possibilities for simplification of structure in express and contract logistics business

COMBINED FINANCIALS CONSIDERING 100% OWNERSHIP OF CONTRACT LOGISTICS

Particulars	Reported (Continuing)		Contract Logistics		Combined	
	FY23	FY22	FY23	FY22	FY23	FY22
₹ Crores						
Revenue	18,051	19,062	341	344	18,392	19,406
EBITDA	1,129	1,268	121	136	1,250	1,404
EBIDTA Margin	6.3%	6.7%	35.5%	39.5%	6.8%	7.2%

One-off Operational Costs		
₹ Crores	Q4FY23	Q3FY23
Provision for Doubtful Debt	36.8	-
Germany FT loss	5.9	-
Other one-off costs	24.7	16.4
Total one-off costs	67.4	16.4

- The combined numbers presented above are more appropriate to consider as they exclude businesses which are already demerged and include Contract Logistics business, which is now in 100% subsidiary as the SPA was signed post March 31st, 2023.
- Q4FY23 has one-off operational costs amounting to ₹ 67.4 crs. We do not anticipate any significant one-offs in Q1FY24. Adjusted for these one-off corrections in last two quarter, the FY23 reported EBITDA would have been ₹ 1,213 Crores.

- Resilient business performance over last two years has enabled the Company to reduce debt. As of 31st March 2023, the Company has a consolidated net cash of ₹ 604 Cr.
- Revenue for FY23 declined 5.3% YoY from 19,062 Cr to 18,051 Cr. However, the Gross Profit over same period increased 7.7% from 3,476 Cr to 3,744 Cr. Decline in revenue is largely on account of ocean freight rate decline, which is mostly a pass through in LCL business and hence a similar decline in operating expenses is also visible, barring impact on FCL business and investments in new trade lanes, which would be loss making initially. LCL yield as presented in monthly update (slide 19) has remained almost same from Apr'22 to Mar'23, despite significant reduction in Ocean Freight during the period.
- The volumes continue to remain lower in the flagship international supply chain business due to reduced global trade. Most leading international forwarders have reported 5% to 17% YoY drop in volumes in the quarter ending March 2023. In comparison, our volumes are down 7% YoY in LCL and remained flat YoY in FCL for the quarter ending March. Post February, we witnessed a much stronger March, but April has again been weaker. We now estimate volume pick up to happen with the peak season, which usually starts in July.
- Our standalone numbers represent the India ISC business. During Q4FY23, the standalone revenue has declined by 55% YoY from ₹ 950 Cr in Q4FY22 to ₹ 428 Cr in Q4FY23, while the Gross Profit over the same period has declined by just 2% YoY. This highlights the robust performance of the business in a falling freight rate environment, essentially protecting the margins at a Gross Profit level.

- The company intends to revive profitability in international supply chain business by increasing volumes and reducing SG&A. Yields are expected to remain rangebound with short term decline driven by competitive pressure and bounce back with improved operating parameters including utilisation and share of 40 feet containers.
- Increased SG&A is on account of inflation as well as business expansion, as we continue to invest in people and capabilities to build new products and trade lanes. There are also one-off cost items as presented in earlier slide (slide 4). However, we are also seeing positive impact of cost rationalisation being driven through automation and process improvement. This will offset costs in coming quarters, and we estimate SG&A costs to be lower in following quarters.
- Company intends to offset Gross Profit impact on account of FCL, which contributes to 30% of the total, by way of volume growth once trade environment is normalised. In LCL, yields have remained more stable as freight costs represent smaller share in costs.
- The express business operations are now best in industry and with mega hubs in place, we expect revenue and margins to gradually expand. Contract Logistics business continues its strong performance and is poised for strong growth in FY24.

LCL YIELD DRIVERS

- **Container utilization:** Higher utilization helps achieve operating leverage. Ocean freight cost forms around 35% of revenue on a normalized basis. For every 1% higher or lower utilization from normalized levels, the revenue impact is 1% while the Gross profit impact is 2% higher or lower due to fixed nature. Incremental Gross Profit margin is around 65% for every additional cbm of cargo added to the box.
- **40 feet ratio:** Higher share of 40 feet container in the total container mix impacts the LCL yields positively. This mix declines in a weak environment where lower volume availability leads to a shift from 40 feet container to a 20 feet container. It is tough to quantify the exact impact due to trade lane mix. A switch to 40 feet container implies gross profit improvement by 4-5%. In other words, a shift in 10% of volume from 20 to 40 feet implies a gross margin improvement of about 40-50 bps.
- **Direct routes vs. transshipment:** Greater number of direct routes impact the LCL yield positively. In a downturn, the volumes decline, and resultantly certain direct routes may need to be serviced through transshipment hubs to ensure efficient consolidation.
- **Value Addition:** Higher value addition leads to better yields. Our initiatives like Port to Door help support the LCL yield.
- **Limited impact of ocean freight:** Unlike FCL yield, ocean freight rates have limited impact on the LCL yield. Ocean freight as a component of operational costs is much lower for LCL vs. FCL. For instance, on a normalised basis, the ocean freight forms around 35% of revenue vs. 65-70% for the FCL business.

40 feet Container Usage Index, TTM

Note: The Indices shows LCL Yield rebased to Apr = 100; Container utilization (Cbm/TeU) and 40 feet container usage (40 feet containers as % of total containers) levels rebased as May 2022 = 100, respectively;
 2) Yield data is based on preliminary estimates and may have a variance of 2-3%

- **Procurement capability:** Our procurement capabilities are linked to the volumes sourced. As the Company gathers scale in volumes, the procurement capabilities improve and so does the negotiation power. Procurement capability is also strengthened through our improved and deep vendor relationship developed over the years.
- **Trade Lane mix:** Composition of trade lanes is another factor that impacts the yields. Typically, long haul routes offer better margins when compared to services over shorter routes. As an example, an intra-Asia route would offer lower yields vs. an inter-continental route.
- **Ocean freight:** For the FCL business, movement in ocean freight is usually visible as a direct impact on the yield as it forms a large percentage of operational costs. Considering above factors in mind and to provide an example, over last three quarters, we have seen yields fall by around 30% between higher freight and lower freight environment. Most of the fall in FCL yield is driven by ocean freight as the other two factors (procurement and trade lane mix) have broadly remained unchanged for us.
