PROMPT GUIDE

Hermes Agent – Starter Prompts

Hermes Agent ▪ Resources

Prompt guide

Ready-to-use prompts for Hermes Agent

Copy these prompts into your Hermes workspace to get each use case running. Swap out the bracketed placeholders for your own details, and you're good to go.

How to use this guide: Each section covers one use case from the video, with the exact prompt you need. Replace anything in [brackets] with your own details before pasting into Hermes.

1. Competitor analysis for ecommerce

Monitor competitor pricing and spot promotions before they affect your sales

PROMPT

Every morning, check the pricing pages for [ADD YOUR COMPETITORS' LINKS HERE]. Track their standard prices and any active promotions or discount codes. If any of them drop more than 15% on a product category that overlaps with mine, send me an alert on Telegram with the specifics — which store, which category, the old price, the new price, and how long the sale appears to have been running.

Before you paste this: List your five competitor store URLs in place of "these five competitor stores." You can also adjust the 15% threshold to whatever feels right for your margins.

2. Job search on autopilot

Wake up to a shortlist of roles with a tailored CV ready to go

PROMPT 1 OF 4

Every morning at 10am, search for [INSERT ROLE] on LinkedIn, Indeed, and Wellfound. [ADD ANY FILTERS HERE] For each role you find, score it against my CV for ATS keyword match, rewrite my CV to improve that match while keeping the content accurate, and send me a summary on Telegram with the role, the match score, and what you changed. Wait for my approval before applying.

Before you paste this: Save your CV to your Hermes workspace first so the agent can reference it. Replace the placeholders with the role title and any filters you want (location, salary range, seniority level, etc.).

PROMPT 2 OF 4

Ignore roles in [INSERT INDUSTRY], and skip anything that requires [INSERT NON-NEGOTIABLES]. Those aren't a fit for me.

When to use this: After your first few daily reports, send this to dial in what you don't want to see. Hermes saves your preferences to its user model so future reports improve automatically.

PROMPT 3 OF 4

Google me. Find everything publicly available — LinkedIn, GitHub, any articles or mentions. Then build me a personal landing page based on what you find, deploy it to my VPS, and message me on Telegram when it's done.

What this does: Hermes searches for your public presence, builds a personal landing page as HTML, SSHs into your VPS, and deploys it. You'll get a Telegram notification when it's live. You can keep editing the page just by chatting with Hermes.

PROMPT 4 OF 4

Set up a weekly cron that checks [INSERT SOURCE] for any new activity and drafts an updated version of the landing page. Run it every Sunday at 8pm. Send me a preview on Telegram and wait for my approval before pushing it live.

Before you paste this: Replace [INSERT SOURCE] with wherever your work lives — GitHub, a portfolio site, a publication, etc. Hermes handles the rest on autopilot.

3. Get your notes under control

Turn a messy notes folder into an organised second brain, without doing it yourself

PROMPT 1 OF 2

Go through my notes folder. Tag everything, link related notes to each other, and flag anything that looks like an incomplete task. Interview me first so you understand how I like to organise things — then run the cleanup.

Before you paste this: Point Hermes at your notes folder first. Obsidian is built in as a skill. For Notion, you'll need to connect your API key before running this prompt. Hermes will interview you before touching anything.

PROMPT 2 OF 2

At the end of each month, send me a summary on Telegram — what you found, what you tagged, and what's been added since last month.

What this does: Sets up a recurring monthly review so your notes stay organised over time. You'll also get a moment to revisit ideas you wrote down and forgot about.

REFLECT

Jot down what you're taking with you.

Use this space for the ideas, questions, and next steps you want to remember.

Get Hermes running in minutes

Hostinger's managed Hermes deployment handles everything — API keys, Telegram connection, CLI access, and AI credits all included. Skip straight to using your agent.
