

# SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

Customer: Overnight

Date: February 3<sup>rd</sup>, 2022

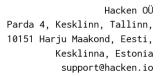

This document may contain confidential information about IT systems and the intellectual property of the Customer as well as information about potential vulnerabilities and methods of their exploitation.

The report containing confidential information can be used internally by the Customer, or it can be disclosed publicly after all vulnerabilities are fixed — upon a decision of the Customer.

#### **Document**

Name	Smart Contract Code Review and Security Analysis Report for Overnight.		
Approved by	Andrew Matiukhin   CTO Hacken OU		
Туре	ERC20 token; Exchange; Staking		
Platform	Ethereum / Solidity		
Methods	Architecture Review, Functional Testing, Computer-Aided		
	Verification, Manual Review		
Repository	<pre>https://github.com/ovnstable/ovnstable-app</pre>		
Commit	E76B55AF45A5125A99C4D32DA8702123D0662EA7		
Deployed contracts	1. HTTPS://Polygonscan.com/address/0xa484E394C9AE2AF31F0C06089C30A9ADCA8666F0 2. HTTPS://Polygonscan.com/address/0x236EEC6359FB44CCE8F97E99387AA7F8CD5CDE1F 3. #### Introduction

Hacken OÜ (Consultant) was contracted by Overnight (Customer) to conduct a Smart Contract Code Review and Security Analysis. This report presents the findings of the security assessment of the Customer's smart contract and its code review conducted between January 10th, 2022 - January 24<sup>th</sup>, 2022.

The second review was conducted on February 3<sup>rd</sup>, 2022.

### Scope

```
The scope of the project is smart contracts in the repository:
Repository:
      https://github.com/ovnstable/ovnstable-app
Commit:
      e76b55af45a5125a99c4d32da8702123d0662ea7
Technical Documentation: Yes, in the repository,
https://docs.ovnstable.io/,
https://drive.google.com/file/d/1PC_3JGt1fIaxRF1gCIUbsScaa8x0Qw9S
Deployed contracts:
1. HTTPS://POLYGONSCAN.COM/ADDRESS/0XA484E394C9AE2AF31F0C06089C30A9ADCA8666F0
2. HTTPS://POLYGONSCAN.COM/ADDRESS/0X236EEC6359FB44CCE8F97E99387AA7F8CD5CDE1F
3. HTTPS://POLYGONSCAN.COM/ADDRESS/0X7B5EDC1C0B0E7212A08DEB2392EFBF7845FA019E
4. HTTPS://POLYGONSCAN.COM/ADDRESS/0X61B9FF9ADD9B143D399134C09235E97DF6BAE4B2
5. HTTPS://POLYGONSCAN.COM/ADDRESS/0X2B2139C4B82C46D43CB4C690DEC314140D74EC4A

9. HTTPS://POLYGONSCAN.COM/ADDRESS/0X5885E81C9E509C95366F63FD4608FBA73C545CEA
JS tests: Yes, in the repository
Contracts:
      Balancer.sol
      Exchange.sol
      PortfolioManager.sol
      RewardManager.sol
      UsdPlusToken.sol
      Vault.sol
      governance/OvnGovernor.sol
      governance/OvnToken.sol
      registries/Portfolio.sol
```

We have scanned this smart contract for commonly known and more specific vulnerabilities. Here are some of the commonly known vulnerabilities that are considered:

Category	Check Item
Code review	<ul><li>Reentrancy</li></ul>
	<ul><li>Ownership Takeover</li></ul>
	<ul><li>Timestamp Dependence</li></ul>
	<ul><li>Gas Limit and Loops</li></ul>
	<ul><li>DoS with (Unexpected) Throw</li></ul>
	<ul> <li>DoS with Block Gas Limit</li> </ul>
	<ul> <li>Transaction-Ordering Dependence</li> </ul>
	<ul><li>Style guide violation</li></ul>
	<ul><li>Costly Loop</li></ul>
	<ul><li>ERC20 API violation</li></ul>
	<ul> <li>Unchecked external call</li> </ul>
	<ul><li>Unchecked math</li></ul>
	<ul><li>Unsafe type inference</li></ul>
	<ul> <li>Implicit visibility level</li> </ul>
	<ul> <li>Deployment Consistency</li> </ul>
	<ul><li>Repository Consistency</li></ul>
	<ul> <li>Data Consistency</li> </ul>
Functional review	<ul> <li>Business Logics Review</li> </ul>
	<ul><li>Functionality Checks</li></ul>
	<ul><li>Access Control &amp; Authorization</li></ul>
	<ul><li>Escrow manipulation</li></ul>
	<ul><li>Token Supply manipulation</li></ul>
	<ul><li>Assets integrity</li></ul>
	<ul> <li>User Balances manipulation</li> </ul>
	<ul> <li>Data Consistency manipulation</li> </ul>
	<ul><li>Kill-Switch Mechanism</li></ul>
	<ul><li>Operation Trails &amp; Event Generation</li></ul>

## **Executive Summary**

According to the assessment, the Customer's smart contracts are well-secured.

Insecure	Poor secured	Secured	Well-secured
		You are here	

Our team performed an analysis of code functionality, manual audit, and automated checks with Mythril and Slither. All issues found during automated

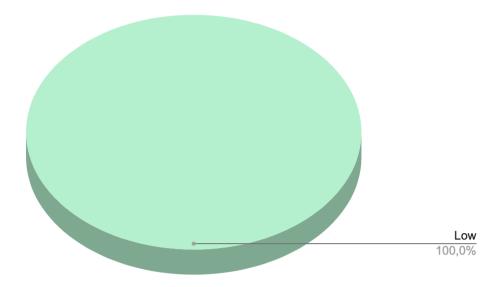

analysis were manually reviewed, and important vulnerabilities are presented in the Audit overview section. All found issues can be found in the Audit overview section.

As a result of the audit, security engineers found 3 low severity issues.

Graph 1. The distribution of vulnerabilities after the audit.

# **Severity Definitions**

Risk Level	Description
Critical	Critical vulnerabilities are usually straightforward to exploit and can lead to assets loss or data manipulations.
High	High-level vulnerabilities are difficult to exploit; however, they also have a significant impact on smart contract execution, e.g., public access to crucial functions
Medium	Medium-level vulnerabilities are important to fix; however, they can't lead to assets loss or data manipulations.
Low	Low-level vulnerabilities are mostly related to outdated, unused, etc. code snippets that can't have a significant impact on execution

#### Audit overview

#### ■ ■ ■ Critical

No critical issues were found.

#### High

No high severity issues were found.

#### ■ ■ Medium

No medium severity issues were found.

#### Low

1. Local variable that could be declared constant

Local variables that derive only from constants should be declared constant to save gas.

Contracts: WadRayMath.sol

Variables: halfRatio

Recommendation: Extract local variable as a constant.

2. Missing event for changing idleToken

Contracts: ConnectorIDLE.sol

Functions: setIdleToken

Changing critical values should be followed by the event emitting for better tracking off-chain.

Recommendation: Please emit events on the critical values changing.

3. Function state mutability can be restricted to view

Functions that never change state variables should be declared as **view** to save gas.

Contracts: Balancer.sol

Function: buildBalanceActions

Recommendation: Please use keyword view.

## Conclusion

Smart contracts within the scope were manually reviewed and analyzed with static analysis tools.

The audit report contains all found security vulnerabilities and other issues in the reviewed code.

As a result of the audit, security engineers found 3 low severity issues.

#### **Disclaimers**

#### Hacken Disclaimer

The smart contracts given for audit have been analyzed in accordance with the best industry practices at the date of this report, in relation to cybersecurity vulnerabilities and issues in smart contract source code, the details of which are disclosed in this report (Source Code); the Source Code compilation, deployment, and functionality (performing the intended functions).

The audit makes no statements or warranties on the security of the code. It also cannot be considered as a sufficient assessment regarding the utility and safety of the code, bug-free status, or any other statements of the contract. While we have done our best in conducting the analysis and producing this report, it is important to note that you should not rely on this report only — we recommend proceeding with several independent audits and a public bug bounty program to ensure the security of smart contracts.

#### Technical Disclaimer

Smart contracts are deployed and executed on a blockchain platform. The platform, its programming language, and other software related to the smart contract can have vulnerabilities that can lead to hacks. Thus, the audit can't guarantee the explicit security of the audited smart contracts.
