

QUALITY SHORT-TERM SKILLED NURSING at Autumn Leaves

Registered Nurse Staffing

Autumn Leaves: 44 minutes Texas Average: 24 minutes

Availability of registered nursing staff per resident per day. Registered nurses have the highest training level among nursing staff. Nursing levels are most associated with successful rehabilitation.

Consistent Nurse Staffing

Autumn Leaves: 99.7% Texas Average: 95.1%

Percentage of days where federal standards for registered nurse staffing hours were met. Adequate staffing is associated with better safety and outcomes.

Emergency-Room Visits

Autumn Leaves: 3.5% Texas Average: 10.7%

Percent of patients who needed to go to an ER (ED) during their stay. Indicative of higher quality of care and attention to patient safety.

Patients Able To Return Home

Autumn Leaves: 59.6% Texas Average: 46.2%

Percentage of patients who were discharged from the nursing home to their own home or residence, an indication of successful rehabilitation.

Prevention of Falls

Autumn Leaves: 100% Texas Average: 98.9%

Percentage of short-term rehab patients who did not experience any falls resulting in a major injury, such as bone fracture or dislocation.
