Universal Power
Procedures Table

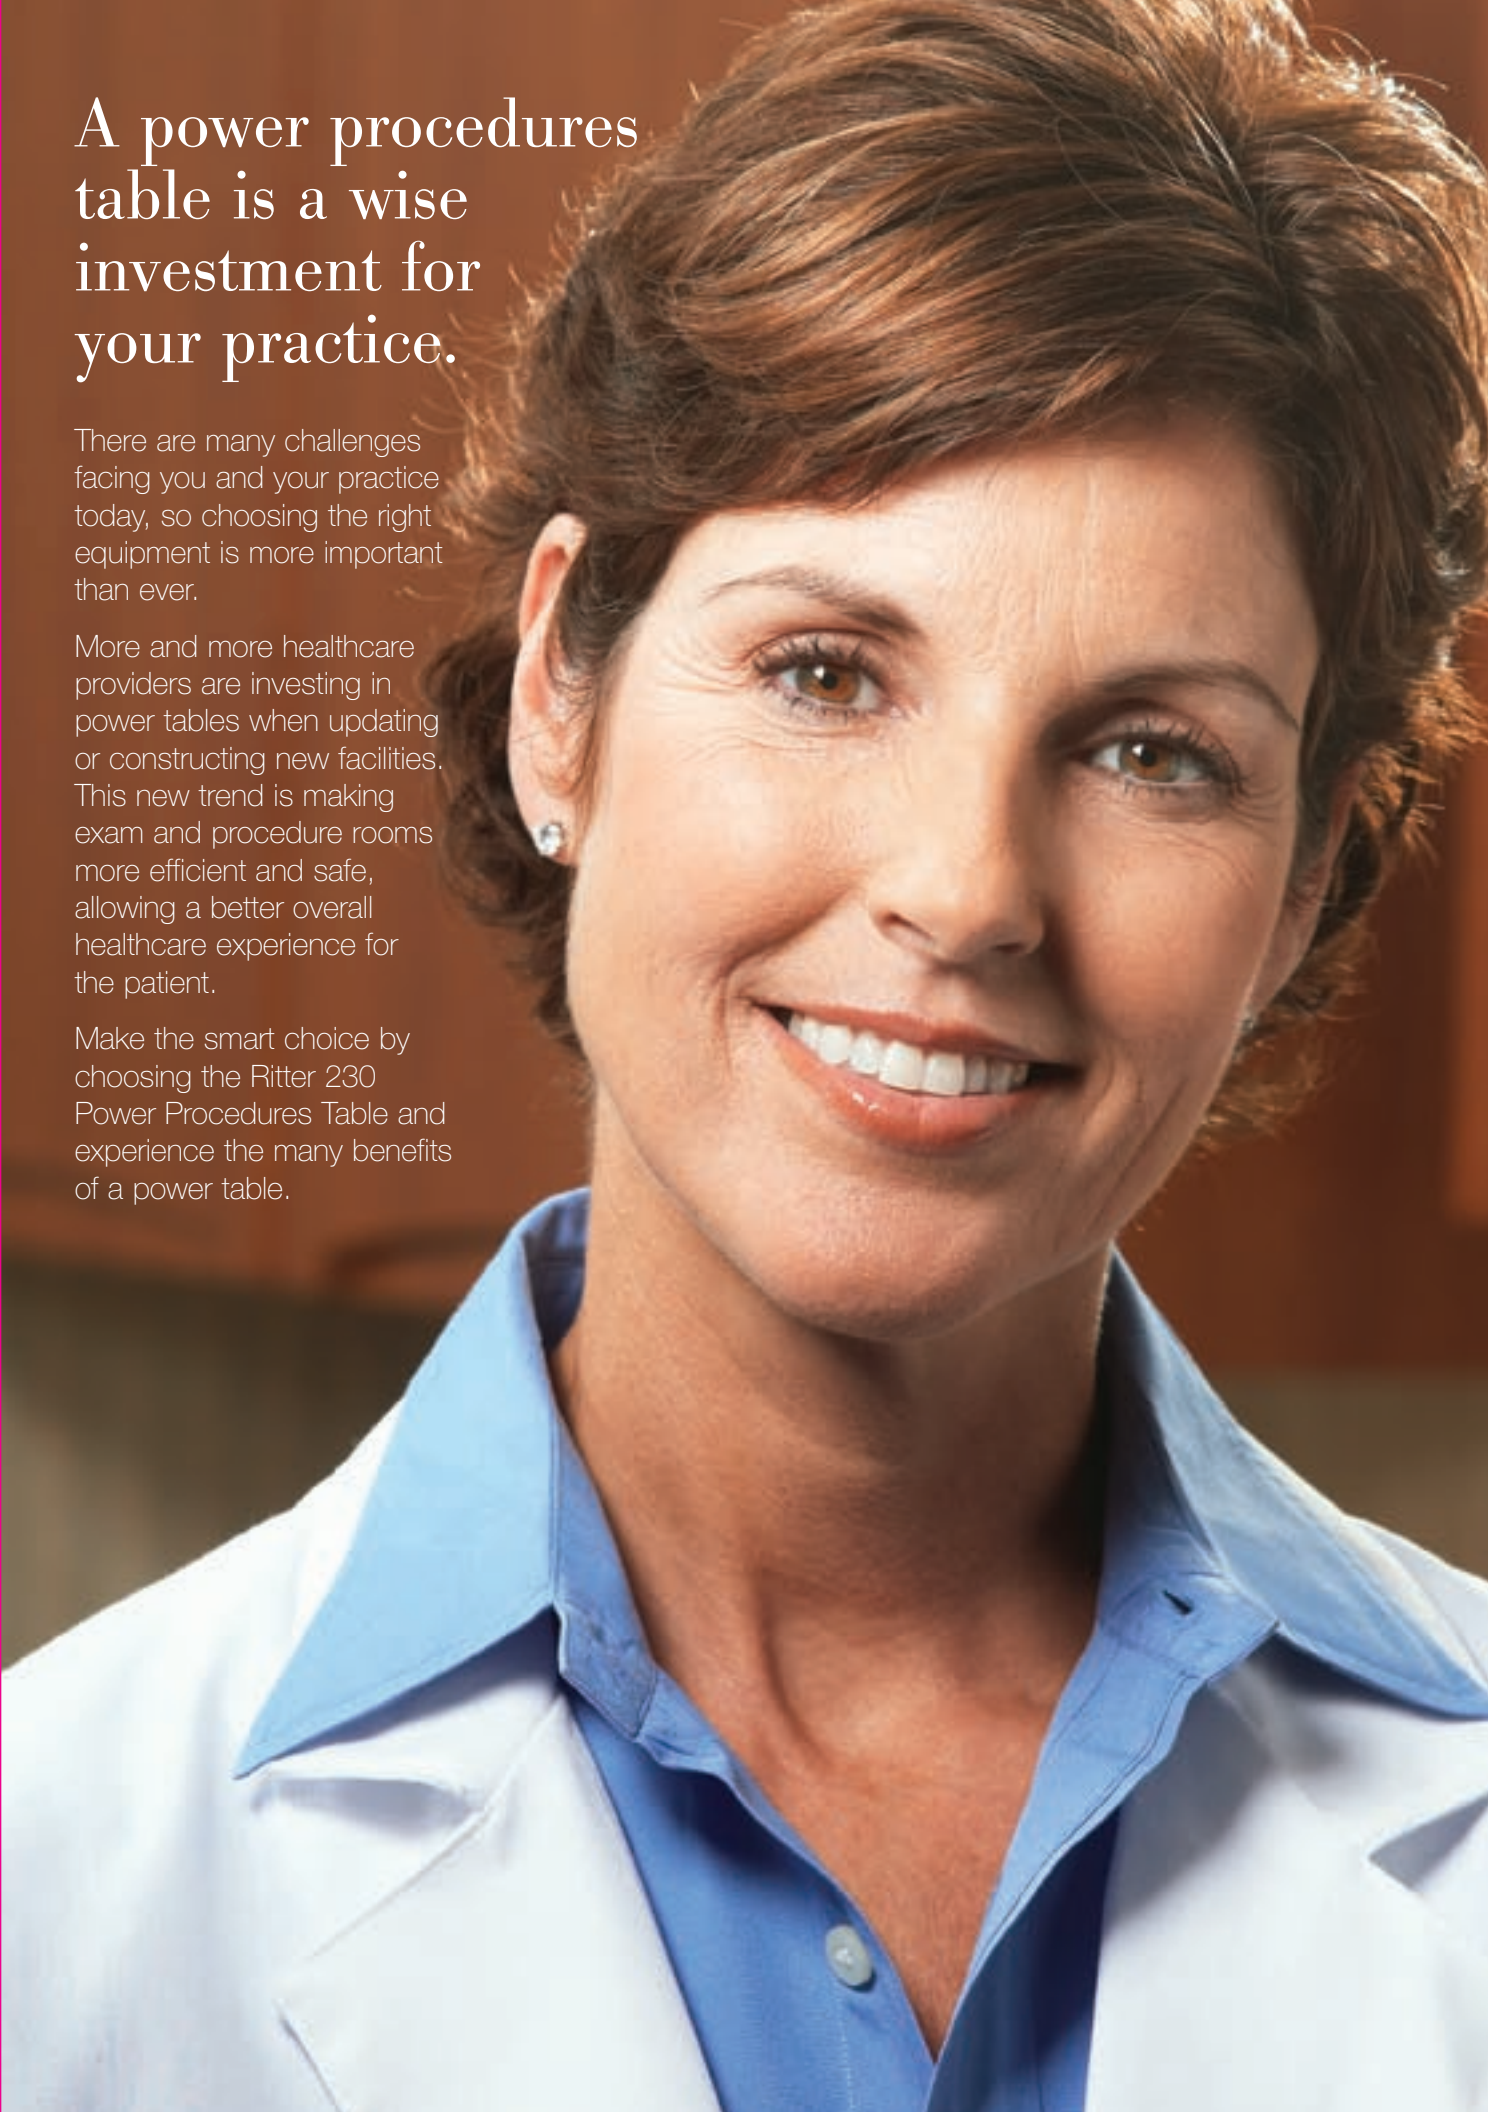

Ritter®
by MIDMARK

A power procedures table is a wise investment for your practice.

There are many challenges facing you and your practice today, so choosing the right equipment is more important than ever.

More and more healthcare providers are investing in power tables when updating or constructing new facilities. This new trend is making exam and procedure rooms more efficient and safe, allowing a better overall healthcare experience for the patient.

Make the smart choice by choosing the Ritter 230 Power Procedures Table and experience the many benefits of a power table.

230 Universal Pro

The Right Thing to Do...For Your Practice, Your Staff and Your Patients

As the practice of medicine changes, more procedures are being performed in the office than ever before, making efficiency essential.

Positioning patients can be a difficult task when dealing with less mobile, elderly and special needs patients. The Ritter 230, with its low height and multi-positioning capabilities, improves office efficiency by allowing you and your staff to easily position patients with the touch of a button; reducing the likelihood of fatigue, back and neck strain and workplace injury.

Patients will feel more comfortable and secure when they can easily get onto a table and experience smooth and steady movement during positioning. Their anxiety will be reduced, and they will feel satisfied with the level of healthcare you provide.

Consider the Ritter 230 Power Procedures Table a long-term investment for your practice, your staff and your patients!

The Ritter 230 with power height, back, foot and tilt allows you to effortlessly and precisely position patients for a multitude of procedures.

Optional hospital grade outlets (on each side) allow easy access to electrical power providing a clean look to the room and floor space free of power cords.

*Product shown with electrical outlet option

Procedures Table

The Ritter 230 is a power procedures table with basic features, making it very affordable. Better yet, the Ritter brand has been providing quality products to healthcare professionals for over 50 years and is recognized as an industry leader.

Ergonomic and intuitive standard hand control in easy-to-find location.

Optional foot control accessory maintains sterile field and can be used in combination with hand control. Select your style...traditional linear style or more efficient disc style.

Linear

Disc

The Ritter 230 satisfies your positioning needs...

Knee-Chest

Tool-less reconfigure of the foot support provides the perfect position for colon and rectal exams and procedures.

Lithotomy

Extending the stirrups and treatment pan, lowering the foot support and tilting the seat provide the perfect position for OB/GYN exams and procedures.

Trendelenburg

Whether better positioning the patient, treating for shock or faintness or increasing anesthesia onset, the Trendelenburg position offers a full 30° of tilt.

Flat

The table supports exams and procedures requiring supine, prone, left lateral or right lateral positioning.

Low Entry

With the increasing number of elderly and disabled patients, the low entry position makes it easy and safe for the patient to get on and off the table.

Rotation

Exam and procedure rooms are being equipped with more and larger devices. Inefficiency results when moving these devices to the patient. Outfitting your procedures table with the rotation option simplifies this task by allowing you to move the patient instead of the device.

The simple touch of a pedal (highlighted in photo) on either side of table permits 350 degrees of rotation; touch the pedal again to lock table in place. It's that easy!

Ritter 230

S P E C I F I C A T I O N S

A 24-inch wide and flat upholstery option offers greater accessibility to the patient. The seamless design ensures a great look and easy-to-clean surface.

Ritter 230 Universal Power Procedures Table (Shown with 24" wide and flat upholstery option)

Adjustable arm system accessory offers patients a stable platform in accessing the table and sense of security during positioning. Arms rotate and lock into one of three possible positions and are removable...all without the use of tools.

Articulating armboard accessory supports patient's arm. Its ball joint design permits multi-directional movement.

Locking casters accessory provides mobility without sacrificing valuable floor space.
