

Avante LA-540

Aspirator and Liposuction System

Advanced aspirator for surgical procedures

The Avante LA-540 Aspirator utilizes two state-of-the-art positive displacement pumps. These dual-headed pumps relieve back pressure, allowing each individual pump to pull against the patient so that a deep vacuum is quickly reached and maintained. If one pump should stop working, the other three continue functioning independently.

The positive displacement pumps used in the Avante LA-540 are some of the quietest on the market due to the 1" shock mounts that eliminate vibration, and an advanced muffler and insulation system.

DISPOSABLE ACCESSORIES (SOLD SEPARATELY)

Suction Tubing (10/box)

- Special soft formulation reduces "tubing torque" for ease in handling, yet it's strong enough to prevent collapse
- Relieves strain on surgeon's wrist, elbow and shoulder
- Large bore, 3/8" I.D., to maximize flow and drainage capacity
- Full 10' in length for ease of use
- Transparent for easy and accurate visualization of drainage exudate

Liners (10/box)

- IP canister system features a reusable canister in combination with a disposable liner

Filters (6/box)

- Designed specifically for high flow aspirations, this filter could save you from a costly aspirator breakdown, and is a must for tumescent technique procedures
- 144 sq. in. of effective filtration area, and is not a paper filter compared to others
- 0.3 micron filter with a D.O.P. rating of 99.975%, which meets or exceeds industry standards
- Can handle flow rates of up to 225 liters per minute and is a must for the protection of your staff and your equipment

**Includes a limited five-year warranty on all parts and labor.*

SPECIFICATIONS

Weight:
64 lbs

Dimension:
17" x 18" x 18"

Voltage:
110 or 220 V

Max Vacuum:
29+ inches Hg

Max Flow:
7.5=CFM

Sound Level:
29+ -3db

Pump:
2x2 Piston

Horsepower:
2/3 hp
