

Nimbus

Disinfecting System

The life-saving robot for whole room disinfection

The ONLY whole-room disinfection with HOCl fog:

- 28 minute avg. cycle time with IMMEDIATE room reentry
- Reaches 100% of surfaces and room air
- ZERO pathogen transfer and human variability
- Delivers LOG 4-6 EPA registered efficacy

Details

This disinfecting robot is the integration of high technology and chemistry. Whole-room atomization, or fogging, ensures that every surface in the patient room is covered with Microburst disinfecting solution – even on the back sides of equipment and under the bed.

The disinfection cycle is designed to be fast and simple so it can be used after each discharge, before a new patient is admitted. This means less manual cleaning time and the assurance that pathogens have been killed everywhere.

- ✓ 300 times better than manual cleaning alone
- ✓ 100% surface contact by fogging
- ✓ EPA-Registered, hospital-grade disinfectant solution, Microburst
- ✓ Active ingredient is Hypochlorous acid (HOCl)
- ✓ Up to Log 6 kill: 99.9999% effective
- ✓ Wireless tablet controls Nimbus outside the room
- ✓ Automatic data collection
- ✓ Rapid Room® Technology means immediate room re-entry

Nevoa Microburst Solution

Nevoa Microburst Solution® is an EPA-Registered, hospital-grade disinfectant, whose active ingredient is Hypochlorous acid (HOCL). HOCL is a unique, environmentally-safe disinfectant that occurs naturally in the human body to kill invasive organisms and fight infection.

The Rapid Room process starts with the activation of the HOCL via the Patented Peel – Push – Shake cap on the Microburst bottle. After Nimbus atomizes Microburst into the room, this disinfectant cloud is completely removed through a dehumidification process.
