

MacIntosh Blades - Improved Vision

Three MacIntosh Blades Designed To Improve Your View of the Vocal Cords.

Laryngoscopes

With Conventional Illumination

REDUCED FLANGE E-MAC™

Patent # Des. 413.977

A modification of the English Profile blade by reducing the flange. This will enable the user to exert less force on the maxillary incisors while allowing more movement at the distal end to assist in visualizing the vocal cords. The added channel improves visualization of the cords and provides a guide through which an endotracheal tube may be inserted. Blades made of surgical stainless steel.

MAC VIEW™

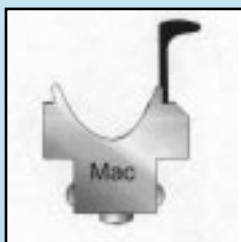

AMERICAN PROFILE (FOREGGER/RUSCH TYPE)

This blade design provides the extended channel to users who prefer the American Profile MacIntosh blade. Blades made of surgical stainless steel.

ENGLISH CHANNEL E-MAC™

(PENLON® TYPE)

This design provides the extended viewing channel for users who prefer an extended flange in the MacIntosh blade. Blades made of surgical stainless steel.
