

# MacIntosh Blades - Improved Vision

Three MacIntosh Blades Designed To Improve Your View of the Vocal Cords.

## Laryngoscopes

With Fiber Optic Illumination

### MACINTOSH REDUCED FLANGE

Patented modification to the "English" profile laryngoscope blade. Reducing the flange will enable the user to exert less force upon the maxillary incisors. A channel has been created which adds strength to the blade. This provides a channel through which an endotracheal tube may be inserted after visualizing the cords.

#### FEATURES:

- Protect Teeth
- Channel for Tube Guide
- Increased Viewing Area

### MAC VIEW™ AMERICAN PROFILE (FOREGGER/RUSCH TYPE)

This blade design provides the extended channel to users who prefer the American Profile MacIntosh blade.

### ENGLISH CHANNEL E-MAC™ (PENLON® TYPE)

This design provides the extended viewing channel for users who prefer an extended flange in the MacIntosh blade.

*All above blades are made from 303/304 surgical stainless steel and are provided with 4mm, replaceable fiber optic bundles. GreenLine® blades and handles are fully compliant with ISO standard 7376-3 and interchange perfectly with companies conforming to the "Green System". (i.e. Anesthesia Associates, AMS, Heine, Propper, Rusch and Welch Allyn)*
