

# SALTER LABS®

## Salter-Style® TLCannula™

*A Salter-Style Cannula setting a NEW STANDARD in patient comfort and convenience for long term oxygen therapy (LTOT) patients. Available in several popular Salter-Style oxygen delivery models.*

*New...Adult Demand TLCannula™  
(This model is available with 4' and 7' connecting tubes.)*

*The TLCannulas are assembled with gray colored, closed cell, soft foam cushions placed over the cannula headset tubes. The cushions provide a new dimension of comfort for sensitive "over the ear" tissue.*

### Features

- Salter-Style cannula with soft foam cushions placed over the head set tubing
- Cushions are installed during the assembly process
- The TLC cushions move easily back and forth on the head set tubes
- Unique, patented, anatomically correct face piece design
- TLCannulas are available in a wide selection of popular Salter-Style cannulas
- Now available in a dual port demand type cannula

### Benefits

- Increased patient satisfaction; results in a reduction of nonscheduled home visits
- No assembly is required, means time savings for the care provider and the cushions will not fall off
- Easy for patient to reposition for the most comfortable and secure fit
- Provides a more "natural" fit, and reduces patient anxiety
- Easy to find a comfortable fit and reduces unnecessary time consuming service visits
- Provides maximum comfort for the LTOT patient using either a dual port, portable or stationary conserving device

**Variety of uses. . . Hospitals, Skilled Nursing Facility, Clinics, Homecare,  
Assisted Living, Extended Care**

## *TLCannula™ is now available in the following popular models of Salter-Style® Cannulas*

**1600TLC...**A unique, patented design which sets the standard for comfort. All Salter-Style cannulas are anatomically shaped with soft, curved nasal prongs.

**1606TLC...**All the comfort features of the 1600 model, connecting tubing is not included.

**1600QTLC...**All the comfort features of the 1600 model. However, the curved face piece and nasal prongs are larger to accommodate higher flows (up to 8 LPM). It is considerably quieter and provides a more soothing environment for the patient.

**1616TLC...Micro...** all the comfort features of the 1600 model. This version uses a smaller molded face piece, nasal prongs and cannula tubes. It is lighter in weight, less conspicuous and is intended for low flow (up to 3 LPM) applications.

**4804TLC and 4807TLC...**Demand *TLCannulas* for use with dual port oxygen conservation delivery systems. A permanent barrier in the cannula's face piece allows one prong to sense inhalation/exhalation while oxygen is delivered through the other prong.

## *TLCannula*

*Gray colored, soft foam ear cushions are pre-assembled over the cannula headset tubing for comfort and convenience.*

All *TLCannulas* incorporate the patented features common to all *Salter-Style* cannulas. Over the years our cannulas have earned customer acclaim, as an industry standard for long term "wearability comfort". The gray colored, closed-cell foam cushions on *TLC* models are permanently installed on the cannula tubing. The foam cushions slide easily on the head set tubing to achieve the most comfortable fit and to diminish chafing and tissue injury over the ear. **An added benefit of *TLCannulas* is a reduction of unnecessary home visits to your more demanding customers.**

## *Ordering Information*
