Introduction

Theatre equipment specialist DRE, Inc. offers a high quality range of Operating Table Accessories. All of the items are designed and produced using the latest materials and manufacturing techniques. Our mission statement is:

'To manufacture and market operating theatre equipment to the highest standards of materials, workmanship, innovation and after sales servicing and support; to understand our customers, their needs and moreover the solution'.

Following this policy we have developed product ranges and aspects of these products that are very unique. The products compiled in this brochure reflect our ongoing commitment to these principles.

General Information

Pressure care: helping protect against infection
In theatre there is a strong emphasis on pressure care – minimising a patient's risk of developing pressure sores caused by immobility during an operation and the use of anesthesia. Pressure sores are of particular concern in tissue viability as broken skin inevitably makes the patient more vulnerable to infection.

We have products specifically designed for pressure care:

K8 mattresses – available for most makes of operating table and fitted as standard on DRE Anetic mobile surgery tables:

- made of a gel-feel foam which moulds to the patient's body (in the science of Kinetics, there are eight points of contact the human body makes when lying on a hard surface – hence K8), thus relieving the pressure by distributing the patient's weight as evenly as possible
- antibacterial and microbial fungistatic properties - the outer cover of each mattress is made of an anti-microbacterial, water resistant, vapour permeable material which allows the skin to breathe. The unique fabric sealing system effectively welds the outer material together to give an almost unbreakable seal, making the K8 a class leader in infection control.

Azure and Oasis gel pad and positioning products:

- Azure uses two unique silicone materials which replicate skin and body tissue – it conforms to individual's body contours to provide maximum pressure relief, shear reduction and protection against nerve damage
- Oasis and Oasis Elite ranges consist of both silicone gel pads and positioning devices, which evenly distribute body weight and don't 'bottom out' – qualities essential for the relief of pressure during surgery

Guaranty

All of our products are manufactured to documented in-house quality control procedures, individually inspected and guaranteed against any defects in material or workmanship.

After Sales Service

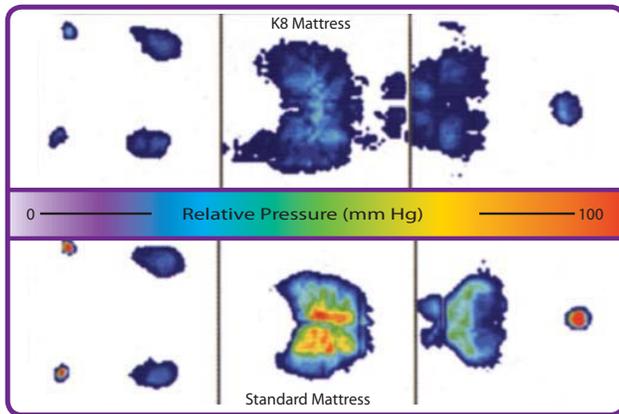

Our qualified sales team is available for consultation and can often provide samples on site for appraisal.

K8 Operating Table Pressure Care Mattresses

K8 Pressure Care Mattresses

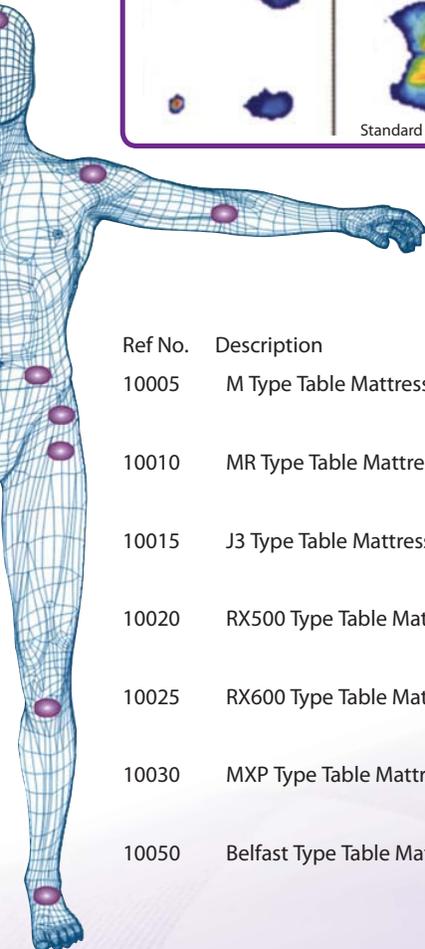

Recent evidence suggests that any patient undergoing surgery for more than three hours faces a risk of developing pressure sores, caused by the immobility during the operation and the use of anesthesia. These products are designed to minimize these effects: the K8 Pressure Care Mattress is available for all makes of operating table and can be custom made to specific requirements.

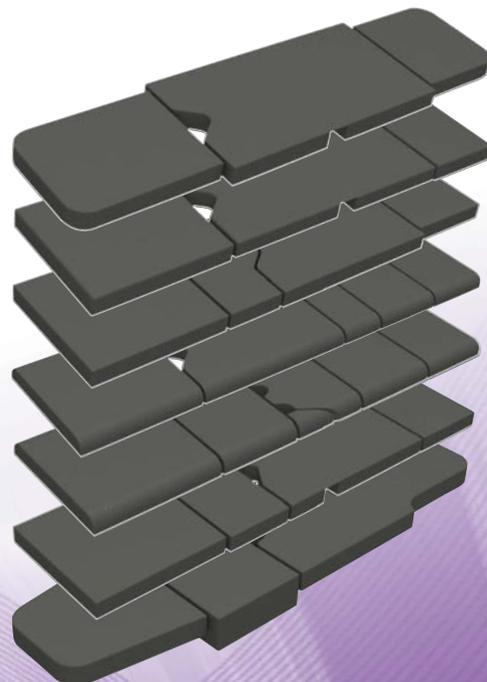

The mattresses are made of a gel-feel foam which moulds to the patient's body, in the science of Kinetics, there are eight points of contact the human body makes when lying on a hard surface – hence K8, thus relieving the pressure by distributing the patient's weight as evenly as possible and minimising the risk of decubitus ulcers.

- High Risk Pressure Care Mattress
- Independently Tested
- Latex Free
- Antibacterial/ Vapour Permeable
- Welded Seams
- X-Ray Translucent
- Specialist Fitting Service Available

Gynecology Accessories and Supports

Pal Pro™ Stirrups

The Pal Pro™ stirrup is our latest in power-assisted legholders. This stirrup allows control of the level of lithotomy and abduction from the release handle. Because of the unique piston design, the stirrup does most of the work lifting the patient's legs. The floating boot is self adjustable, to minimise pressure on the calf. Positioning the patient has never been easier.

- Unhindered surgical access throughout full lithotomy range
- Abduction adjustments made quickly from end of boot
- Floating boot design protects superficial nerves
- FootHugger™ boot pads provide comfortable and secure leg positioning
- Easy-to-squeeze handle
- Intra-operative repositioning by one person from end of boot
- Simplified setup reduces staffing requirements and time
- Feather Lift power assist minimises staff lifting
- Easy-to-clean boot and protective piston cover
- Accommodates patient weight up to 159 kg

Heavy Duty Stirrup

A new addition to our range is the Heavy Duty Stirrup which easily accommodates patients with larger calves.

The reinforced rod and joint assembly and the flexible boot make the system capable of positioning patients weighing up to 363 kg

Mobile Storage Cart

The perfect way to store and protect your investment, this strong and lightweight cart holds and transports the stirrups or legholders.

Compact and state-of-the-art, it can hold any stirrup from any manufacturer. The sturdy moulded four-castor polymer base is dent-resistant and the deep storage bin is a great place to store clamps and pads securely.

Also Available:

Heavy Duty Stirrup capable of positioning patients weighing up to 363 kg

Ref No.	Description
10750	Pal Pro Power Assisted Stirrups
10758	Power Assisted Heavy Duty Stirrups

Pressure Relieving Gel Supports

Oasis

Pressure Relieving
Gel Supports

Pressure Relieving Gel Supports

Pressure Relieving Gel Supports

Oasis offers a complete range of lightweight, reusable and superior pressure relieving pads and positioners for use in the operating theatre. The range has been designed to re-distribute weight and provide excellent pressure relief at all risk levels.

It is a fact that up to 25% of bed sores begin in surgery and so it is important to ensure that every operating theatre is equipped with the most effective pressure relieving products.

OASIS:

- Silicone superior pressure relief
- Conforms to body shape
- Latex free and skin compatible
- Comprehensive range
- Can be heated or cooled

OASIS ELITE:

- Foam and silicone gel combination
- Enhanced protection
- Lightweight
- Highly durable
- Easy to clean and maintain

AZURE:

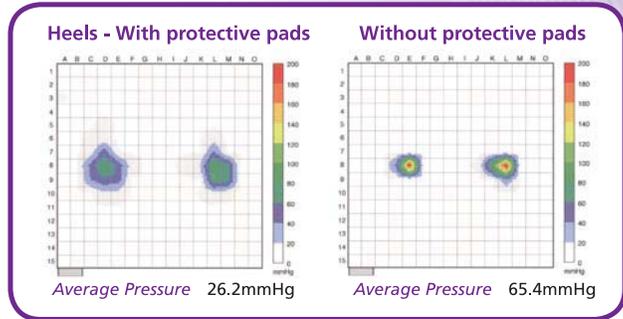

- Revolutionary new gel combination
- Contoured protection
- Redefining pressure care
- Advanced surgical positioning and protection
- 12 month guarantee

Oasis[®] Gel Supports

The Oasis range of reusable silicone gel pads and positioners provide superior pressure relief to the patient during various surgical procedures.

The gel evenly distributes body weight, essential for the relief of pressure during surgery.

All Oasis products can be heated or cooled, have an X-ray attenuation of 89.7%, are latex free and non-allergenic. They conform to the patient's body shape and have a 12 month guarantee against manufacturing defects.

Oasis Elite

Oasis Elite products combine a unique lightweight foam with silicone Trugel™ to provide superior pressure relief and enhanced patient protection in theatre.

The range conforms to the patient's body shape, distributing weight over a greater surface area to reduce potential nerve damage and has undergone rigorous durability tests.

Oasis Elite products are more than 50% lighter than comparable gel-only devices. The products are easy to clean and maintain.

Pressure Relieving Gel Supports

Azure® Gel Supports

Azure has come about as a result of Trulife's commitment to continually provide improved levels of pressure care products to both patients and healthcare systems.

The revolutionary new gel combination works together to replicate and act as an additional layer of protective tissue and skin, conforming to the individual user's shape in a more contoured and less structured manner. This results in effective protection against nerve damage as well as pressure sore prevention.

Azure products are re-defining pressure care and are set to change the standards in theatre.

Obstetric Pads and Mattresses

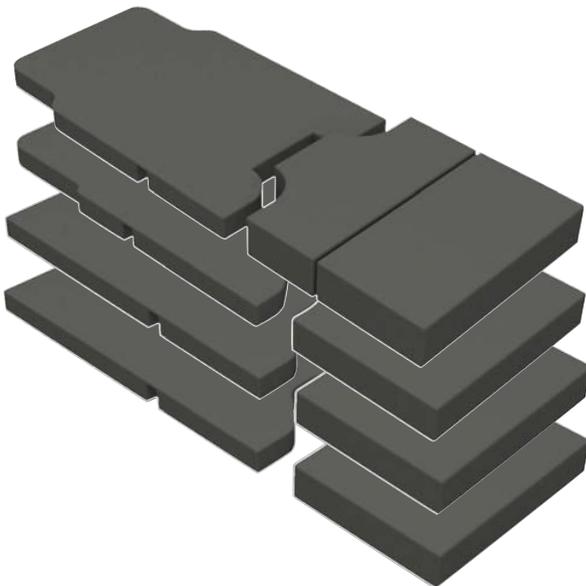

Obstetric Pads and Mattresses

Obstetric Pads and Mattresses

Obstetric Pads and Mattresses

The K8 mattresses manufactured from gel feel foam actually moulds to the patient's body, thus relieving pressure by distributing the patient's weight as evenly as possible. Antibacterial, water resistant materials, which are vapour permeable and latex free, allow the skin to breathe. The unique fabric sealing system effectively welds the outer material together to give an almost unbreakable seal making the K8 a class leader in infection control.
