Compact and accurate respiratory ventilator

The Newport Breeze provides the accuracy needed for tiny neonates and pediatrics, and the flow range needed for adults. The Breeze uses the DuoFlow system to separate the spontaneous flow system from the mechanical flow system. It also has pressure and volume ventilation packaged with comprehensive alarms, and at less than 12 inches square, it can fit into small spaces.

► A Quick Look

- DuoFlow system: Allows you to customize the pressure wave pattern of the mechanical breath to meet time constant restraints. It then tailors the spontaneous flowrate for maximum patient comfort and minimum work of breathing.
- Comprehensive alarms: Easy to set using the high and low control knobs and easy to read in the back-lit digital display.
- Compact size: At less than 12 inches square, the Breeze can fit into small areas where space is limited.
- Built-in battery back-up: Provides up to one hour of emergency back-up power for added safety.
