

Philips HeartStart AED

Onsite Automated External Defibrillator

“We offer the most complete and trusted defibrillator solution to help caregivers treat SCA quickly and effectively wherever it occurs.”

The Philips HeartStart biphasic AED (Automatic External Defibrillator) can be used on patients of any age, with the use of pediatric or adult defibrillation pads. The HeartStart has an optional training pad cartridge so staff may practice their AED skills and become familiar with the unit. This Philips AED automatically tests all parts, including disposable pads, daily. The HeartStart weighs 3.3 lbs with battery and pads / 2.4 lbs without.

HEARTSTART BENEFITS:

Lightweight: Fully equipped at just 3.3 pounds.

Intuitive: Clean design and clear voice instructions instill the confidence that’s needed when administering therapy to a person in cardiac arrest.

Every-Ready: Powered by a long life (4-year) disposable battery. Automated tests help ensure readiness.

Versatile: Available for use on anyone of any age, including children and infants.

Effective: Patented SMART Analysis heart rhythm assessment and SMART Biphasic defibrillation therapy, clinically proven in nearly 10 years of use. No other biphasic waveform is as well documented.

Easy to Use:

Using the HeartStart OnSite Defibrillator is simple. Pulling the green handle powers-up the defibrillator and activates voice instructions. These instructions are paced to your actions, to help guide you through the entire process, from placing pads on the patient to delivering a defibrillation shock.

Replacable SMART Pads Cartridges:

The cartridge contains two adhesive pads that are peeled and placed on the patient’s bare skin as indicated by the pictures on the pads. The pads are “smart” because they can sense that they have been removed from the cartridge and applied to the patient.
