

Certified Refurbished

DRE Professional Refurbishing Procedures for Surgical Tables

Our skilled in-house biomedical staff is trained to professionally refurbish surgical tables manufactured by Amsco, Skytron, Shampaine and many more. See inside for details about our basic refurbishing procedures. Each step is necessary to make sure your table functions as well as the manufacturer intended and looks as good as new.

Mechanics

Our refurbishing process goes beyond the appearance of the table. We restore each table from the inside out, making sure it functions at levels intended by the manufacturer. Refurbishing procedures include:

- De-grease all internal moving mechanisms and apply new lubricant
- Replace or fill all mechanical fluids
- Inspect and restore or replace all seals, valves, lift cylinders and O-rings
- Replace rubber on feet and brakes, if necessary
- Replace any damaged wheels with new ones, and make sure all wheels function properly
- Inspect alignment and wear of gears, and replace any worn gears
- Disinfect and sterilize all elements of table

Cosmetics

Refurbished tables from DRE are restored to a pristine, near-showroom finish. Our top-to-bottom cosmetic refurbishing process includes:

- Install new patient pads in place of those that are damaged
- Restore the table base and pedestal to a “like new” appearance
- Replace missing or damaged decals with new ones
- Sand, prime and paint all painted surfaces, such as the upper frame and H-frame
- Polish and/or replace stainless steel and chrome fittings

Rigorous Testing

Before a table leaves our biomedical facility, it must pass our stringent testing process. We make sure each table functions as close to the manufacturer's specifications as possible. Our testing includes:

- Complete testing of all electrical circuitry and components
- Conduct drop and performance tests
- Perform articulation test

In addition to the procedures here, our biomedical staff performs refurbishing tasks that are specific to each line of table. Our biomedical staff is trained and experienced in the complete refurbishing of tables manufactured by Amasco, Skytron, Maquet, Champagne, Midmark and more.

Since 1984, DRE, Inc. has provided healthcare facilities with quality medical solutions and dedicated, hands-on personal service. Give us a call at (800) 477-2006 to discuss the needs of your facility. We'll work with you to determine the equipment you need to provide your patients with the best possible care.

We can help you with new and refurbished surgical tables, anesthesia workstations, vital signs monitors, operating room lights, and much more.
