

Zoll M Series

Defibrillator

A model for every application

Zoll M Series defibrillators offer a full lineup to meet your clinical requirements. In order to make the line easier to use, Zoll has taken the care to standardize the interfaces and common features between units to reduce training and speed up decision making.

FEATURES

- › Zoll M Series upgrades provide maximum performance and flexibility in every product with add-ons designed to perform to your exacting standards.
- › 12-Lead ECG is available in standard analog for fax transmission or digitally for real-time transmission with virtually any available communication technology.
- › Pulse Oximetry / SpO2 uses Masimo SET® signal processing technology for accurate measurements in the presence of motion, high ambient light and low perfusion and when pacing.
- › EtCO2 features Respiration Novamatrix End Tidal CO2 monitoring with interchangeable mainstream or sidestream sensor options to accommodate all patients.
- › Non-invasive Blood Pressure (NIBP) offers single, stat, or fully automated functions for optimal patient assessment no matter the circumstances. Invasive Blood Pressure (IBP) is also available.

CONSISTENT ACROSS ALL MODELS

- › The most compact and easy to read unit in its class while offering a built-in AC power and battery charger that doesn't add size or weight.
- › System features consistent controls and easy to use menus to reduce training costs, optimize operation, and minimize errors.
- › Rectilinear Biphasic™ waveform provides superior efficacy while optimizing patient safety.
- › External Pacing offers superior capture at lower mean thresholds, reducing muscle artifact and ensuring improved patient comfort and tolerance.
- › Event documentation from internal memory, along with removable PCMCIA cards for data transfer. The M series includes RS232 data transfer capabilities.
- › Specific paddles and electrodes are available for a wide variety of applications.
