BLST

Business Logic Security Testing

Protect your API in the context that matters – business goals, user journey, and IT KPIs.

BLST platform provides discovery and observability, API security posture management, and proactive ongoing monitoring.
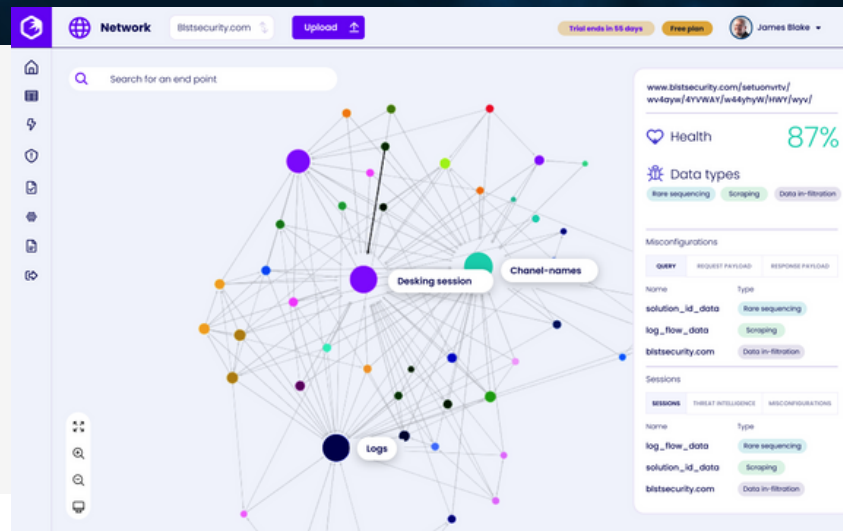

WHY BLST?

RISE ABOVE THE NOISE

We are a business logic security testing (BLST) company focusing on API security. That means we not only detect vulnerabilities but also define and sort them by their business and operational impact.

YOU CAN'T FIGHT WHAT YOU CAN'T SEE

We can provide immediate observability in less than an hour! (Touchless!!) We can also execute a POV in a quarter of the time that is considered the industry standard.

THE CHERRYBOMB ADVANTAGE

We developed an open-source project called Cherrybomb, which runs on hundreds of APIs. It provides real value to the community for free and gives us a unique and broad understanding of the ecosystem with which to train our system.

A Holistic API Security platform - Broad Visibility, Advanced Posture Management, Monitoring You Can Trust

- Super-fast integration (minutes)
- Full picture discovery – broader-than-market standard
- Tailored to your API using advanced AI to find unique vectors and attacks
- Existing system – information collected and insights fed into your program
- No need for sharing or transferring sensitive information
- A graphic representation of your API
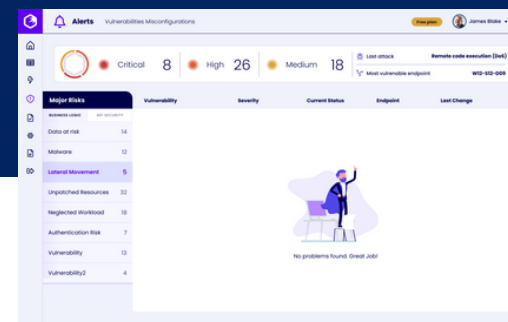

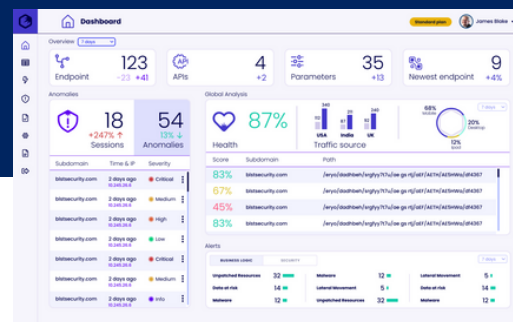

DISCOVERY AND VISIBILITY

Using your read-only access to your cloud, we will centralize your API sprawl and present it on a unified screen

API POSTURE MANAGEMENT

We check OWASP Top-10 API and much more. Based on the possible attack vectors, we can provide a clear prioritized impact-map of your organization and remediation docs

MONITORING

Detect attacks on your supply chain, get notifications (new endpoints, new shadow points, etc.)

ADVANCED AI

Context-aware sensitive information detection and parameter impact for posture management
