

# Secure your Human-Risk Posture Against Real-Time Threats

THREAT INTELLIGENCE | TARGETED PHISHING SIMULATIONS | DYNAMIC TRAINING | REAL-TIME PHISHING ASSESSMENT

## Our Vision

Our vision at AironWorks is to use our cutting-edge technology to help organizations secure their human risk posture against real-time threats, through our AI-based platform that generates tailor-made comprehensive security awareness training programs for our clients.

## How does it work?

### Layer 1: Understand your Human-Risk Posture from an Attacker's Perspective

The AironWorks system scans the web, dark web, and social media to generate an analysis of your human-risk posture. This includes a breakdown of ongoing information sources, analysis of your organizational structure, insights into the online exposure of high-profile employees, and an overview of communication channels that could be targeted.

### Layer 2: Learn to Detect Targeted Phishing Attacks

Using the threat intel collected, the AironWorks system then generates real-time, personalized phishing campaigns that target a variety of attack vectors, including email, SMS, social media, web forms, and more. Initially, these campaigns can reach up to 90% phishing failure rates because of how much more realistic and believable they are compared to standard template-based phishing simulations.

### Layer 3: Educate and Empower your Employees with Dynamic Training

To reinforce employees' experiential learning from the simulations, the AironWorks platform provides various training tools for you to train your employees and monitor their progress, such as custom reports, surveys, dynamic educational content, employee and admin dashboards, and more.

### Layer 4: Assess Phishing Attempts Quickly and in Real-Time

Instead of having your employees report suspicious emails to the IT department and potentially wait weeks for a response, the AironWorks AI email and browser extension enables your employees to get real-time feedback on the potential risk level of an email or message with just one simple click.

## Build a Safer Workplace with AironWorks

A multi-layered approach to securing your human-risk posture:

**Autonomously monitoring** and collecting threat intelligence 24/7

Generating **highly targeted, personalized phishing campaigns** that target multiple attack vectors

**Dynamic training** created in real-time to educate your employees on the latest phishing threats

**Real-time phishing assessment** of suspicious emails or messages with just one simple click

## Why isn't the current phishing training enough?

Phishing and social engineering are continuously evolving real-time threats.

The training simulations available today use templates based on real phishing attacks, but by the time these simulations reach employees, they're already outdated. Cybercriminals thoroughly study organizations and research the latest phishing methods before executing attacks, and basic training can't prepare employees to identify these sophisticated attacks.

With AironWorks, **train your employees** on real threats in real time.

## Why Our Customers Made the Switch

**95%**

**Comprehensive** awareness of potential attack vectors

**85%**

**Improved** security guidelines and reporting protocols

**80%**

**Increase** in mentions of cybersecurity and phishing

**50%**

**Increase** in internal phishing reporting
