

# The First Zero-Trust Enterprise Browser

Collapse risk exposure while improving business agility and user experience. A Zero Trust Browser will help you achieve this by turning the browser into an enterprise security control. This solution provides a seamless access experience to both internal private apps, public (SaaS) apps and data, with strict, recorded and audited control over application access and data movement. Additionally, it complements and integrates with existing controls, making it a powerful tool for enhancing security and productivity.

## Productivity and Security combined in one tool.

SURF is a transformative enterprise browser that establishes seamless, secure, zero trust access from any device for any user, including 3rd parties, to deliver immediate productivity. SURF can extend conditional access to privileged administrators and developers, enabling productivity from any device. SURF further renders top threats like Phishing and Ransomware irrelevant.

## Transform the browser into the strongest security asset.

 Secure Third- Party Access	 Bring Your Own Device	 Distributed Workforce Protection	 Ensure Compliance	 Call Centers & Help Desk Protection	 End-to-End Zero Trust
 Replace VDI/RBI/VPN	 Privileged Accounts Control	 User Privacy	 Secure Access Service Edge Enhancement	 Mergers and Acquisitions	 Ransomware and Malware protection

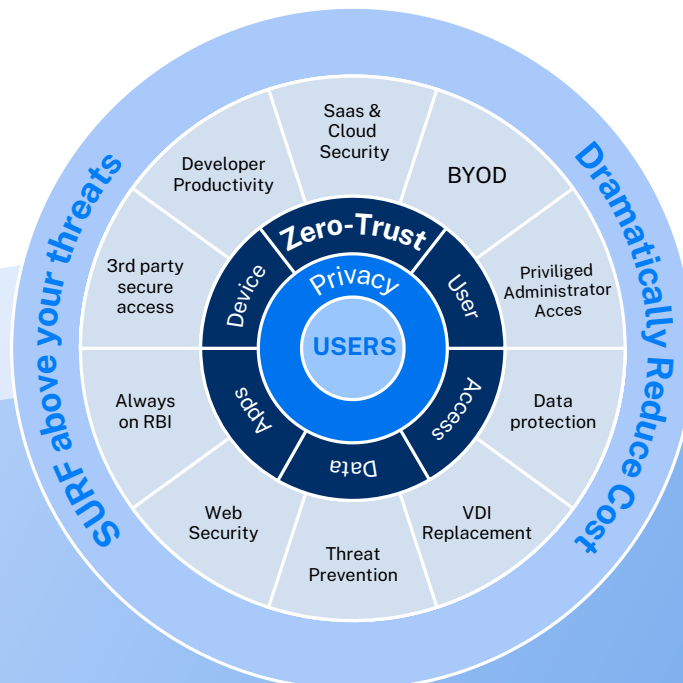

Security built with the modern enterprise in mind - Safer, Faster, Cheaper and more Accessible

### CISO of a top financial company:

"A different approach to endpoint security that can change the future of browsing from the biggest risk to the biggest security asset."

### CISO of a FTSE 100 retailer:

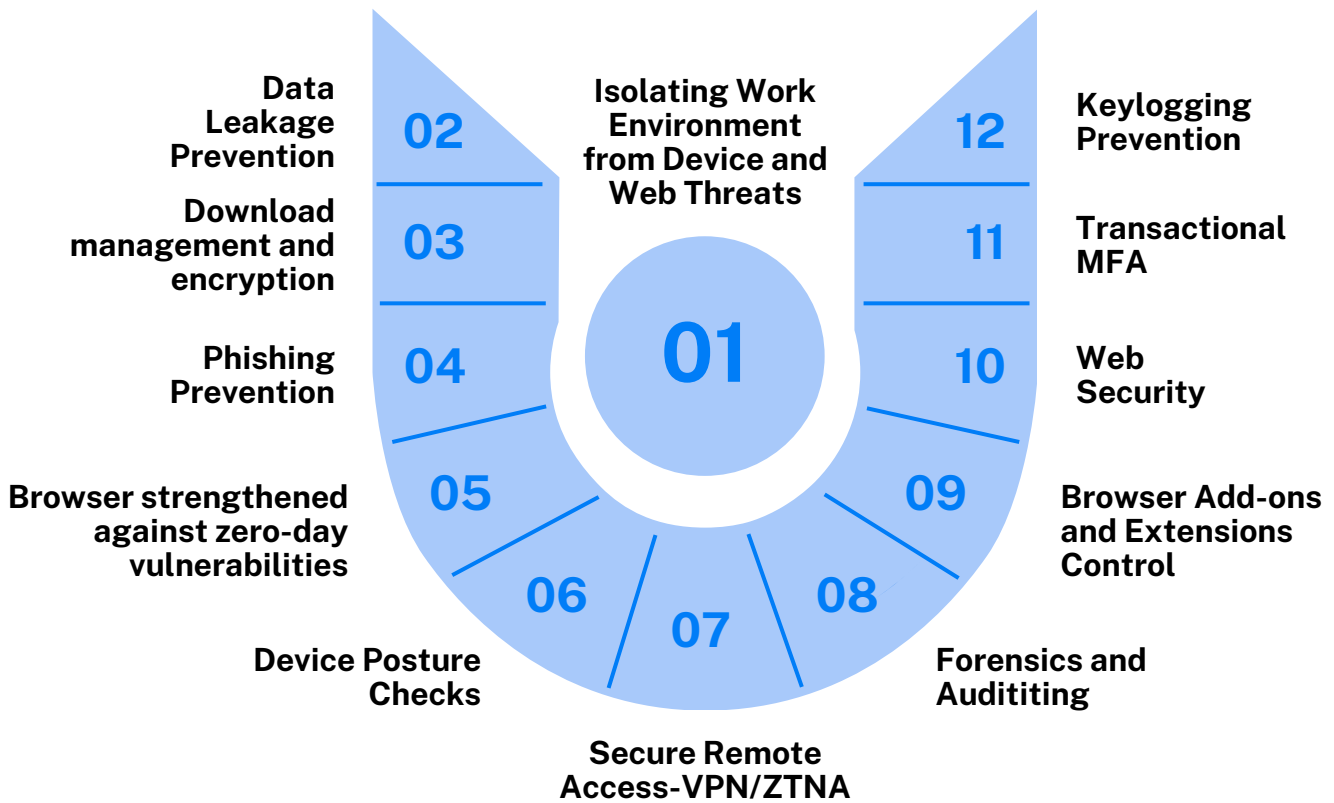

"SURF allows companies to embrace the security of modern technology."

### CISO of a leading insurance company:

"With SURF, developers are permitted to access their preferable tool sections with no disruption or risk of security breach."

# Key Product Capabilities

## Value Proposition

- Dramatic Cost Savings
- Accelerate Business Agility
- Simplify and unify the security stack into one tool.
- Deployment and protection within minutes.
- Collapse Risk Exposure from Phishing, Malware, Privacy Exposure, Data Leakage.
- Visibility and control over enterprise workflows and User Experience
- Prevent Data Breaches and Public Exposure
- Seamless Access to private and public apps for any user from any device
- Fastest path to Zero Trust for users without disrupting existing SecOps systems
- Full control of any public SaaS or private web application
