Your Vision, Our Expertise

Full-Cycle Software Development

From concept to launch, we handle all stages of software development, delivering custom solutions tailored to your business needs.

Startup MVP Development

We help startups quickly bring their ideas to life by developing an MVP to test concepts, attract investors, and gather user feedback for future development.

Enterprise Modernization

We modernize outdated enterprise systems by integrating modern technologies and architectures to keep your business competitive.

Your Vision, Our Expertise

IT Outstaffing & Dedicated Teams

We provide dedicated teams of skilled developers and IT professionals to help you scale quickly, offering flexibility and expertise to meet your project demands.

No-Code Development

With no-code technology we build robust applications rapidly, reducing development time and costs while maintaining functionality and quality.

On-Demand Services

Flexible, on-demand services to meet immediate project needs, with expert support in software development, design, and consulting whenever required.

How We Work

Get quality support at any stage of your product development:

1 **Discovery & Planning**

We closely collaborate with you to understand your needs, define the project scope, and create a clear roadmap for development.

2 **Design & Development**

Our team designs user-friendly interfaces and develops the solution using agile methodologies, ensuring regular feedback from your side.

3 **Testing & Quality Assurance**

We thoroughly test the product to ensure it meets all quality standards, is bug-free, functional, and ready for launch.

4 **Launch & Ongoing Support**

After launching the product, we provide continuous support, updates, feature enhancements, and maintenance to ensure optimal performance and scalability.

Our Customers Raised 80M+ at

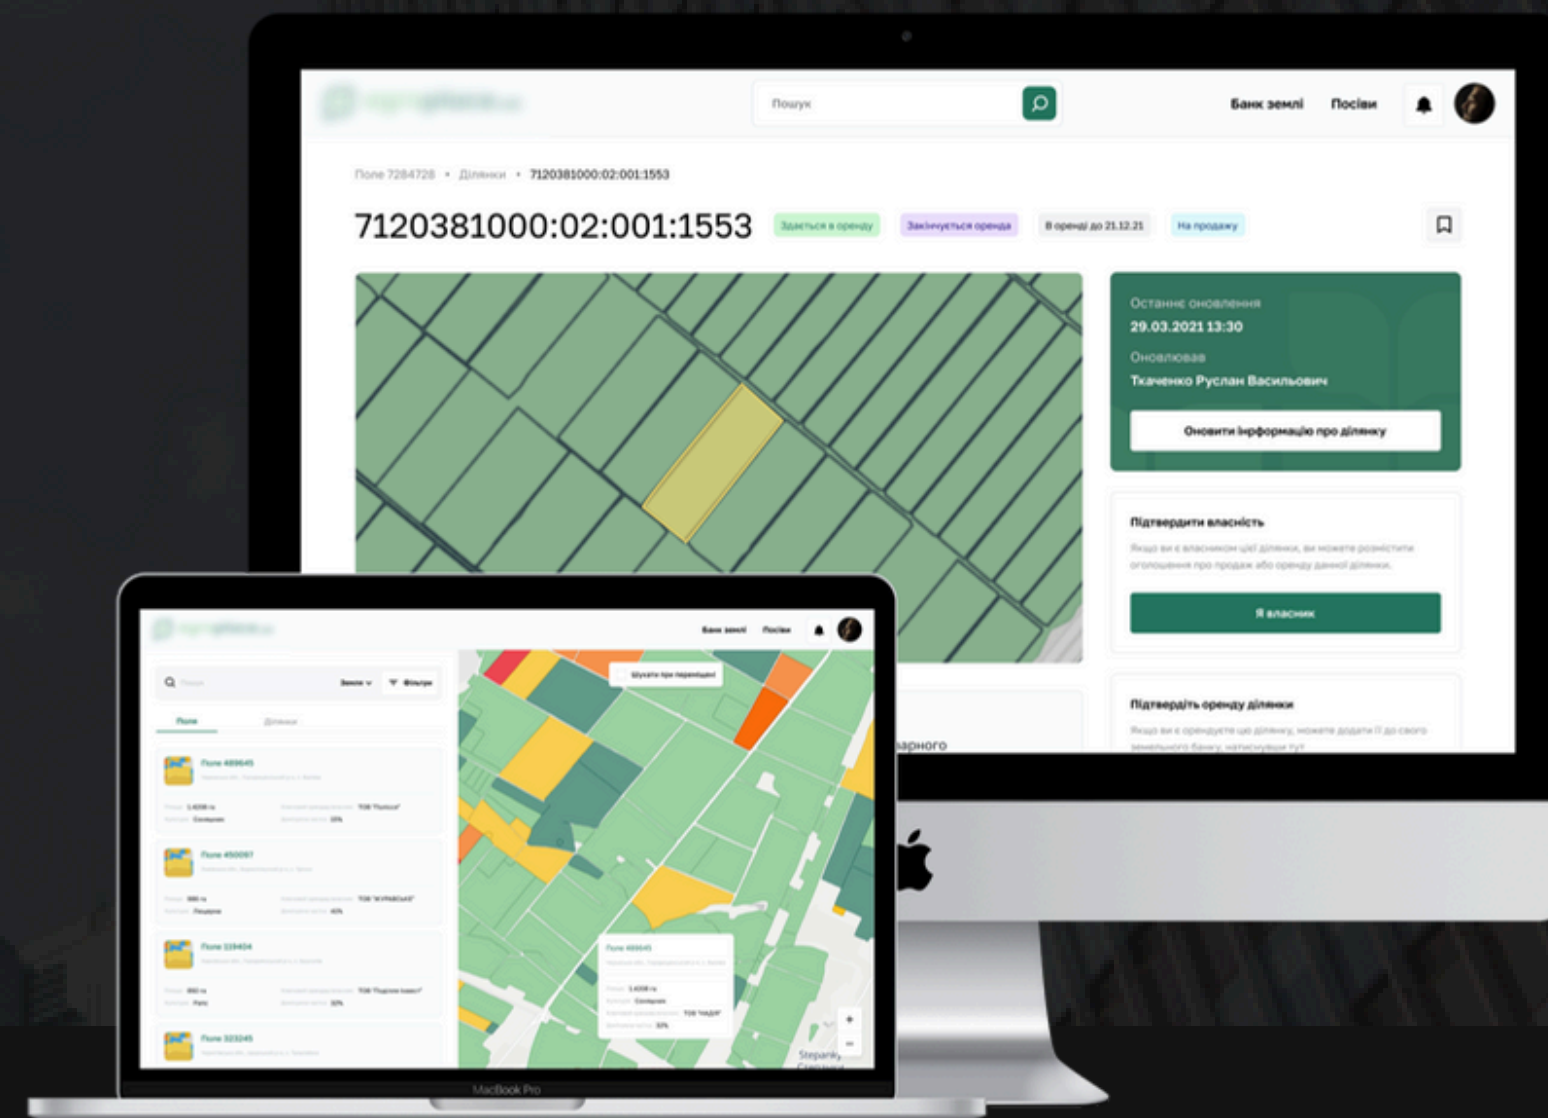

AI

Software Development

Agritech

AI-Driven Agritech Platform

Platform for land data integration providing farmers with transparent access to the open land market.

Challenges

The client had a no-code prototype with low performance, unclear product logic, and no technical architecture. The system couldn't handle complex data or scale effectively.

Solution

We rebuilt the product from zero, designing a full technical stack with 20+ integrated data sources and a high-speed geospatial engine for vector-based land mapping and analytics.

The result is a reliable, high-performance platform that gives farmers full visibility into land data and tools to manage and grow their agricultural operations efficiently.

FinTech

Product Discovery

Platform Upgrade

Shareholder

A SaaS platform to gather and analyze financial data for making reports on market and industry trends.

Challenges

A platform used by a consulting agency needed improvements to ensure accurate data processing and smoother functionality.

Solutions

We thoroughly investigated the platform, identifying bugs and outdated features that impacted data entry, processing, and report generation.

By fixing critical issues, we streamlined data entry, improved efficiency, increased the capacity for processing respondents, and enhanced the accuracy of financial data analytics, enabling faster report generation and better decision-making.

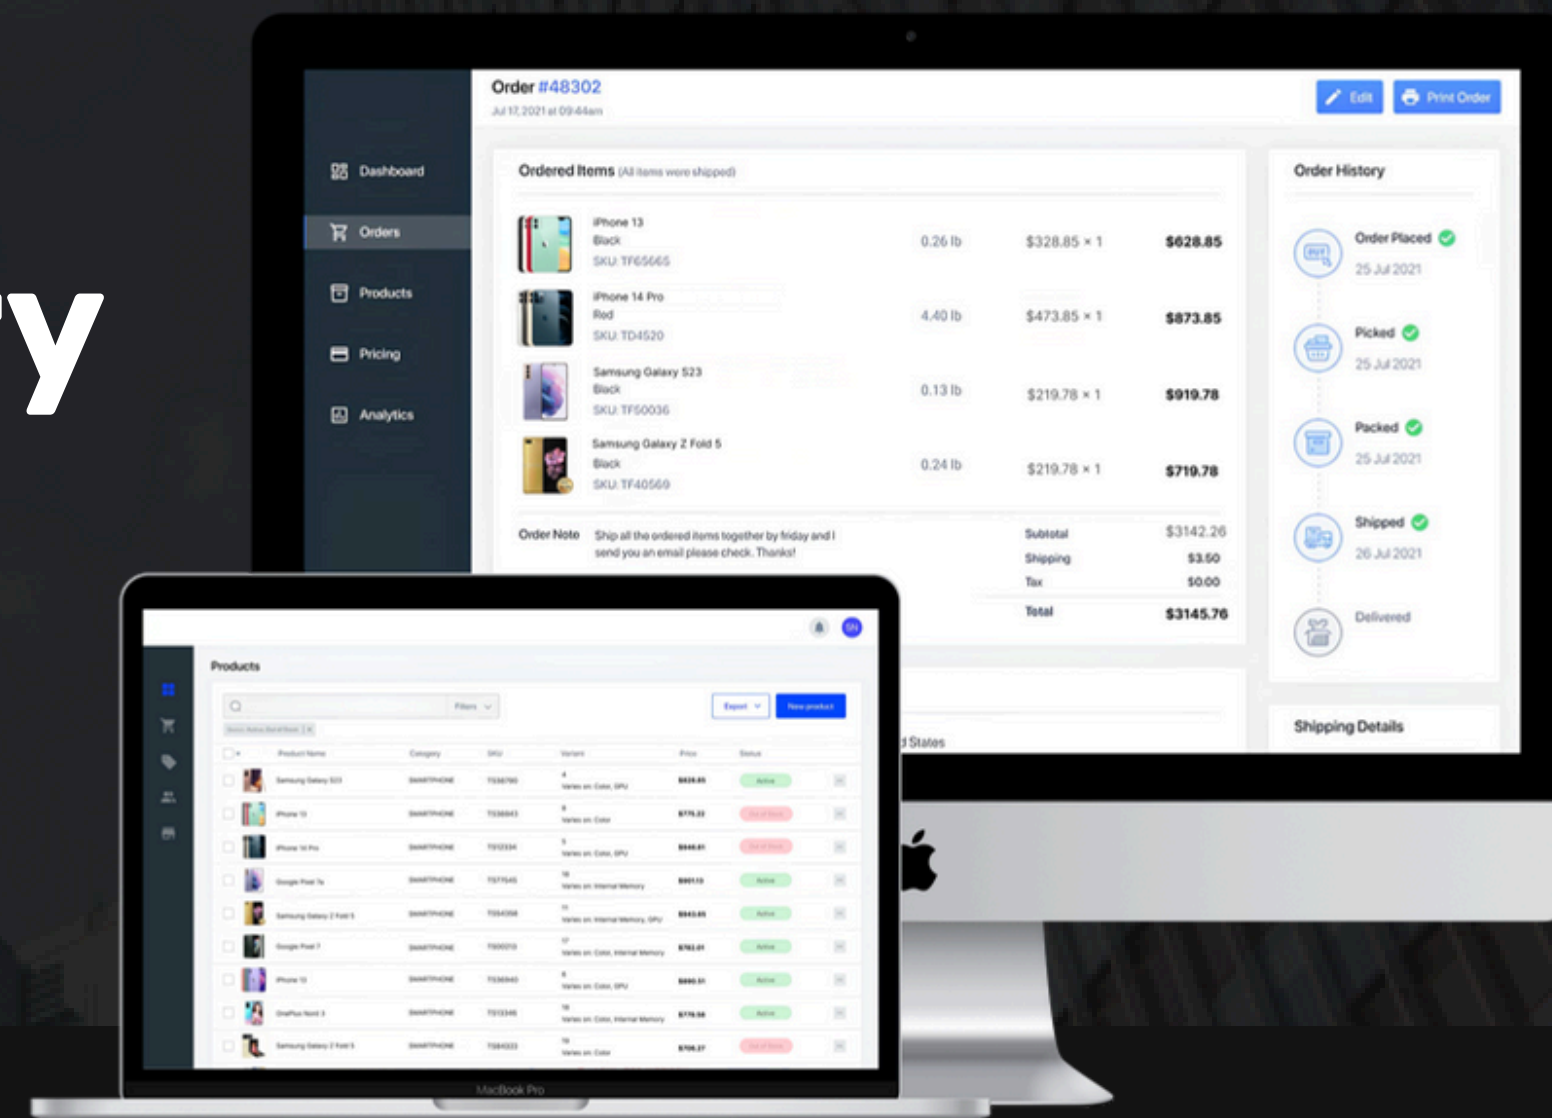

eCommerce

Software Development

Platform for Inventory Automation

A custom eCommerce system to handle website's inventory management across multiple channels.

Challenges

To automate internal processes for the online store by building a system for product tracking and control, reducing redundancies and making the system more efficient and profitable.

Solutions

We built an inventory automation system from scratch, implemented automatic synchronization across multiple marketplaces to prevent overselling, developed a robust SKU management

system, and enabled QR code scanning to streamline product tracking. The result is a fully automated, scalable system that simplifies operations and improves inventory management.

Marketplace

Platform Upgrade

API Integration

Wildcast

A premier podcast ad marketplace to engage with industry's decision-makers on their favorite podcasts.

Challenges

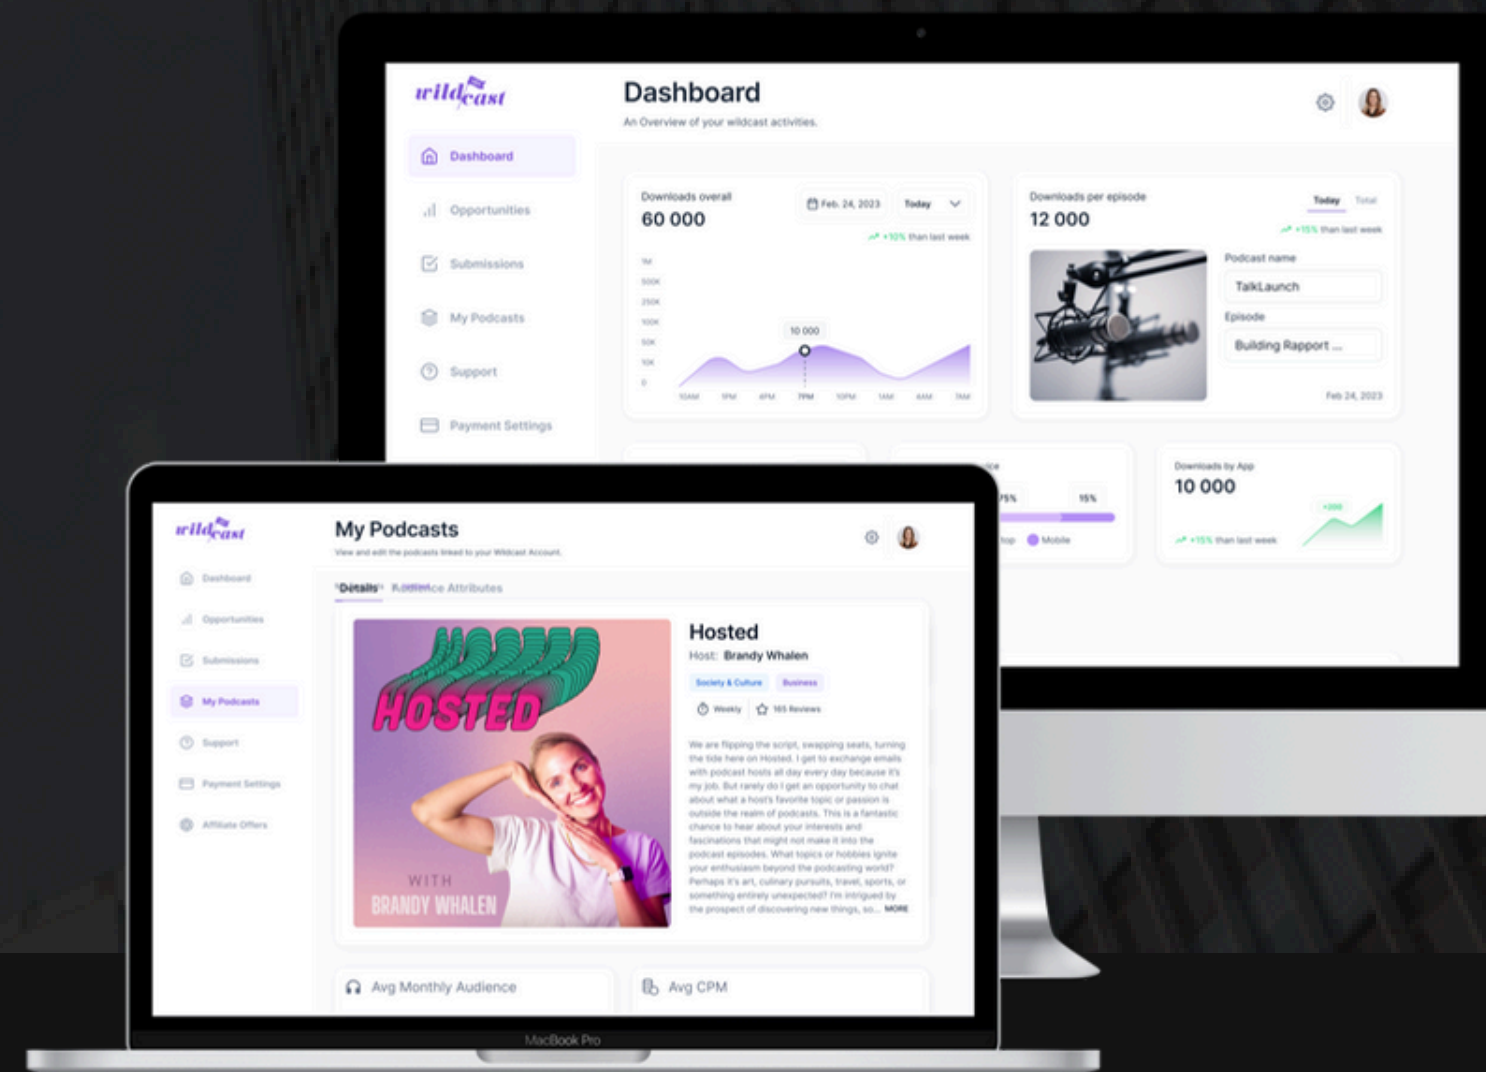

To incorporate important integrations to the podcast platform and introduce new features making it more appealing to users.

Solutions

Our team implemented the necessary integrations, including podcast tracking, profile enhancements, and payout processing. We also introduced new features across podcaster, advertiser, and admin portals, such as payment settings,

signup checklists, and dashboard upgrades.

The result is a more advanced, feature-rich platform that's optimized for better performance, scalability, and user experience.

Mental Health

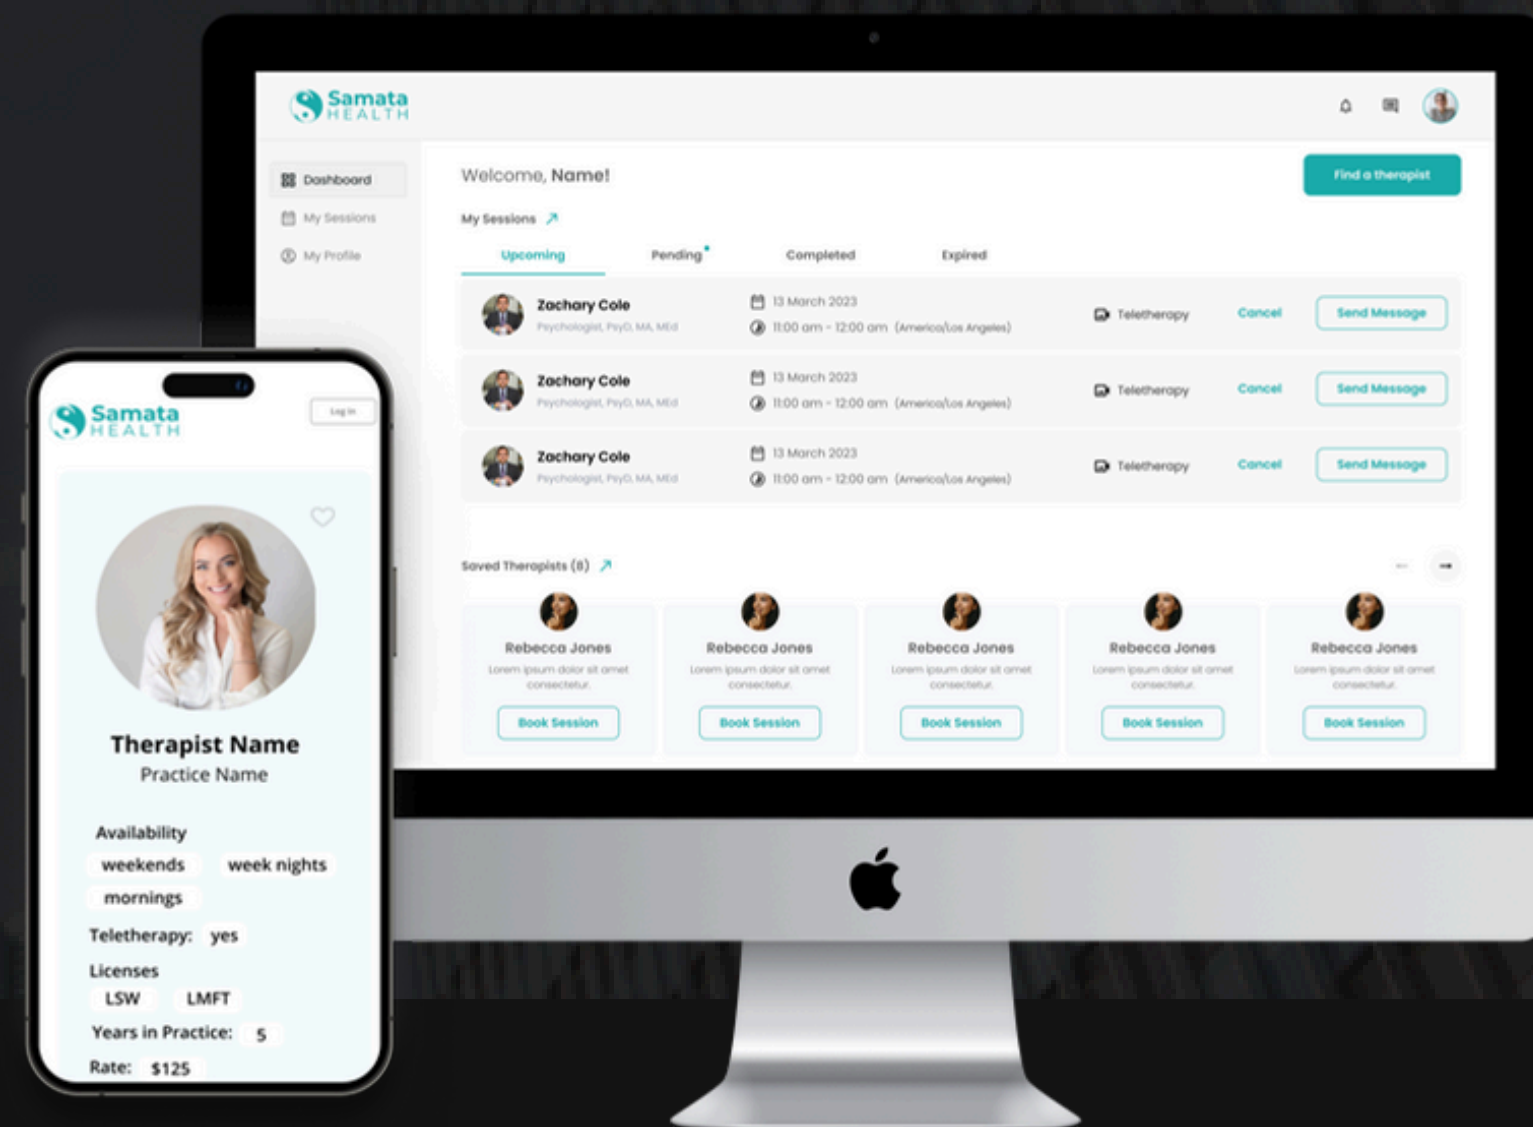

Marketplace

QA

Web Support

Samata Health

A personalized mental health platform that supports corporate employees to fulfill their therapy needs from A to Z.

Challenges

The Samata Health platform faced several key challenges, including poor performance, slow website speed, lack of documentation, security vulnerabilities, and recurring email notification issues.

Solutions

Our team conducted a thorough audit, created essential documentation, significantly improved site speed (from 10-15 seconds to 1 second), enhanced security, and resolved the email errors.

As a result, the platform now delivers a reliable, secure, and fast experience for users, building trust and supporting employee mental health and well-being.
