

Modernization of sewage treatment facilities

The goal is to modernize wastewater treatment facilities by reducing the content of organic substances, phosphorus, nitrogen and other pollutants in discharge waters.

It is planned to carry out work on the modernization of equipment, the use of energy-saving technologies and the introduction of an advanced sewage treatment system.

What does the community need?

- development of design and estimate documentation
- search and attraction of additional financing

Description of treatment facilities:

- the total area of the land plot is 16.1510 ha
- the area of the administrative building is 1202.6 m²
- the area of the first floor is 762.0 m²
- the area of the second floor is 440.6 m²
- boiler room area - 209.5 m²
- the area of the pumping room is 131.6 m²
- the area of the chlorination room is 99.9 m²
- area of complex of containers No. 1 (primary and secondary sedimentation tanks, aeration tanks, mixers) – 1911.5 m²
- the area of the complex of containers No. 2 (settling tanks) is 3212.4 m²
