About us

A QUEST TO FIGHT CLIMATE CHANGE

At ON2Quest, we're committed to providing cutting-edge **gas generation** and **purification technologies** that are reliable, cost-effective, and environmentally friendly for a wide range of industries, including healthcare, electronics, food and beverage, and research institutions.

We've assembled a team of highly skilled professionals to work closely with customers & partners to offer the most optimal solutions to meet their specific needs.

Our **Vision**

is that climate change is a problem caused by the emission of harmful gases that need to be avoided or captured.

Our **Mission**

is to provide advanced gas purification technologies that will be instrumental in fighting climate change.

Our **Unique Approach**

is to use readily available adsorbents in our initial purification products that we will enhance by the introduction of Metal-Organic Framework materials under development

Our Products

On-site **Nitrogen & Oxygen** generators

- Integrated systems as well as core modules
- Avoid harmful emissions from trucking
- Increased overall process efficiency
- Improved Security of supply

Industrial **Gas Purifiers & Dryers**

- PSA, TSA and filtration systems
- Oil free compression of N_2 , O_2 , H_2 and CO_2
- Recycle spent industrial gases
- Core component for electrolysis

Carbon Capture systems

- Dryers and liquifiers
- Industrial applications for CO_2 recovery
- Clean energy applications for carbon capture
