

GAMAX AI portfolio

Introduction

GAMAX is a Hungarian AI company focused on providing solutions to companies and municipalities using computer vision and AI tools, in the fields of SMART City, SMART Parking, and Traffic Monitoring System.

GAMAX AI

In-house machine learning development and system integration

- collecting millions of daily data / historical data
- real-time city, traffic and parking AI data analysis
- traffic and parking prediction with recommended interventions
- decision-making scenarios

City Platform

Data integration, analytics, visualization for all companies and municipalities

- source independent automated data collection
- real-time data analysis
- Zero CAPEX
- urban coordination dashboard
- 3 in 1 - statistics, reports and forecasts
- 4 data layers in 1 platform

G Park

AI-powered Traffic and Parking monitoring with object & LPR module, accuracy is 99.5%

- On and Off-street Parking Availability & Parking Management
- Analyse traffic density; vehicle and pedestrian counts & traffic volume and direction
- Monitor & predict parking fees
- Set up protected city areas & send notifications to authorized personnel about trespassers
- Detect safety violations; parking in the disabled lot or detection of smoke and fire in the parking area to prevent damage to people and property.
- Track and log vehicles by their license plates across monitored areas
- Reserved Lane Management using vehicle differentiation & LPR

Track and reduce operational, environmental and economical costs by exploiting historical data and predictive performance analytics.

GAMAX Group operates at the highest standards of data ethics and integrity.
