

Connect assets to markets with Volue

Extract the full value of your assets and boost profits through integration of data, forecasting, optimisation and trading.

Europe's leading energy brands rely on Volue's solutions

How it works

Short-term asset-backed trading is complex and time-sensitive. With volatile prices, intermittent renewables, and shorter gate closures, success depends on tightly integrated forecasting, optimisation, and trading. Maximise the value of your flexible power generation with Volue.

Optimise use of assets to maximise profits:

- Flexible future proof data structure adaptable to all markets
- Workflow automation of production asset planning
- Embedded optimisation models to maximise profits, respecting all the power asset and power system physical constraints
- Multi technology and multi market support

Trade in markets which maximise profits:

- Support in physical balancing and ancillary service markets.
- Bidding support and market access
- Leading vendor in algorithmic trading on continuous intraday market
- Power and gas scheduling for all European TSOs
