

Smart Indoor Wayfinding for Everyone, Anywhere

Fast, flexible, and app-free indoor navigation for visitors and staff.

Why Indoor Navigation Matters

Hospitals, public, and office buildings can be hard to navigate. GPS apps don't work indoors, leaving visitors frustrated and staff distracted. With limited accessibility for people with reduced mobility, the need for a better solution is clear.

CEDA Maps turns these challenges into a simple, intuitive experience – with **web navigation, QR codes, and kiosks that work instantly**, without the need to download an app.

Smart Navigation Solutions for Every Space

Designed for buildings of any size, our solution makes **indoor orientation intuitive and efficient**. Its modular design allows easy customization – from a single floor plan to complex multi-building environments – helping owners **enhance visitor experience** and optimize space utilization.

For projects requiring higher positioning accuracy, the system can be extended with **BLE-based localization**, providing precise indoor positioning through mobile applications.

Instant Web Navigation

Seamless navigation through QR codes and kiosks. No app download required, simple and user-friendly for visitors and staff.

Professional Space Mapping

Detailed digitization of building interiors, including rooms, corridors, elevators, and staircases, for precise and efficient navigation.

Customizable for Various Environments

Suitable for offices, hospitals, shopping centers, government buildings, and more, thanks to its modular and scalable design.

How it works

1) Assess & Propose

We analyze your space and recommend the best indoor navigation setup for your needs.

2) Create Indoor Map

We turn your building plans into an accessible indoor map that is clear and easy to navigate.

3) Choose Your Setup

We help to pick the right mix of technologies: QR codes, interactive kiosks or BLE beacons for advanced positioning.

4) Deploy & Navigate

Navigate instantly via QR codes or kiosks, improve space use and visitor experience.

Use Cases

- > **Hospitals:** guide patients and visitors to rooms or departments quickly, reduce stress and delays.
- > **Office Buildings:** help guests find meeting rooms and improve first impressions.
- > **Transport Hubs:** simplify transfers in metro stations or terminals.
- > **Cultural Venues:** provide clear wayfinding to exhibits, or specific points of interest.
- > **Shopping Centers:** boost customer satisfaction by making stores and services easy to find.

Why choose CEDA Maps solution?

-> Simple for users

Scan a QR code or use a kiosk – navigate instantly, no app required.

-> Valuable for building owners

Improve visitor satisfaction and gain insights to optimize space usage.

-> Flexible & trusted

Built on years of experience in digital mapping and navigation technologies.

Reference

"Thanks to the implementation of the CEDA Maps solution, visitor orientation in the office building has improved. The navigation on kiosks is intuitive, which leads to higher visitor satisfaction within the building."
