

# domat VISUAL

## App for remote PLC control

Domat Visual offers wide support for connecting to multiple PLC devices. This includes the possibility to download definition files directly from the PLC and allows you to choose between a local network or internet access setup profile. With both the HT300 terminal and the mobile platform, you have a multi-user definition at your disposal. Based on the access level, you can read and change values, including **alarm confirmation** and **setting time programs**.

If the PLC is accessible only through the local network, it can connect to the **Domat Proxy server** through an outgoing connection. This will enable the connection between the PLC and Domat Visual.

Overview and history of **alarm states**.

Possibility to manage the terminal from the **web interface**.

Domat Visual is a **free** downloadable app.  
The version for Windows is available at [www.domat.cz](http://www.domat.cz).
